

## Listing of plants

the following is a listing of some real some made up for One piece finable plants, herbs, spices, useful material plants, poison plants, and drug plants.

D - Drug, Medical  
P - Poisonous  
M - Material  
E - Edible  
S - Spice  
W - Wood Producer  
G - Garden plant

### Terrains

1 - Winter /Tundra  
2 - Dessert  
3 - Tropic  
4 - Swamp  
5 - Mountainous  
6 - Forrest  
7 - Rain forest  
8 - Grassland / Temperate  
9 - Garden

Note I am only listing a collection of plants that I feel is a good selection of ones to be found, Basic Fruits and Veggies are listed as well.

Gardening Plants - In One piece it is not unheard of to have a garden/greenhouse on board. Unless a watering system is made or climate is controlled these plants can die out of their terrain so keep that in mind if the players are growing anything. It is a simple daily task that they can claim to do or set a NPC crew member on. After a given time of weeks in proper climate their garden can produce at a rate of 1d4 unit's a plant a week.

The Plants are Listed as follows with the [ ] indicating the DC Knowledge Nature to identify what you know about said plant ( ) gives a basic look/ description then what uses it has . Only one roll is given per plant but once rolled it determines how much they know or can find out about said plant , Lastly there is the Sell Prices of the plants / Material first you have a basic sell price then you have a good sell price. Determine ahead of time based on the islands Terrain on if there is a call for plants from a different Terrain which may raise the price by a multiplier or if its not wanted lower. This allows the player to sell unneeded supplies for money to get need .

Plant Name [DC for name]            Uses listing  
Description  
Plants Basic Uses [DC for uses]  
Secondary Uses [DC for secondary uses]  
Plant Warning /Hazards [DC for warning]  
Plant BRP / Crafted ITEM BRP

## Making Rolls

There are two ways a player can make rolls in search of plants, If they know what they are looking for they can make a simple Search roll Which DC is based on how easy it is to find by their description of what they are looking for. I.e. one player says he is looking for wood while another player is looking for a certain plant for medical use. Player 1 has a DC of 10 to their search as many people can find trees that can be used for wood easily, while player two has a much higher DC 25 as they need to find a certain plant

within a massive land mass.

Once found the plant can only be described to the player until they make a Knowledge Nature roll to identify the plant and possible uses and useable parts, as well as any warnings for the plant like if its poisonous or not. A survival Roll can also be used to determine if a plant is safe or not to eat, while it wont tell you what parts or what uses the plant is it can tell you if its poisonous or safe to eat The DC is the Caution DC.

To Collect supplies from it the GM will make two rolls the first to see how much of the plant is in supply in the area. This is done a 1d6. The other roll is the amount of units they can gather form the plant.

- 1 There is only the one plant =1 unit of the plant materials
- 2-3 A few plants = 1d8 units of the plant materials
- 4-5 Small Garden = 1d20 units of the plant materials
- 6 Thriving garden = 1d100 units of the plant materials

Plants Listing and die result, Sections are based off of Terrain Climate of the island they are on

<b><u>Winter /Tundra</u></b>			
01	Arctic willow	25	Plantain
02	Bearberry	26	Purslane
03	Blackberry, raspberry, and dewberry	27	Reed
04	Burdock	28	Reindeer moss
05	Cattail	29	Sassafras
06	Chinaberry	30	Sheep sorrel
07	Cranberry	31	Spatterdock or yellow water lily
08	Crowberry	32-34	Strawberry
09	Dandelion	35	Water hemlock or spotted cowbane
10	death lily	36-38	Water lettuce
11	Elderberry	39-41	Wild dock and wild sorrel
12-13	Fireweed	42-44	Wild gourd or luffa sponge
14	Hemlock, fool's parsley	45-48	Wild onion and garlic
15	Iceland moss	49	Wild rose
16	Indian potato or Eskimo potato	50-75	Junk Item
17	Poison ivy and poison oak	76-99	Material Chart Item
18	Marsh marigold	00	Random item from other chart
19	Oak		
20	Peppermint		
21	Persimmon		
22-24	Pine		

<b><u>Dessert</u></b>			
01-03	Aloe vera	39	Purslane
04	Abal	40-42	Reed
05-08	Acacia	43	Saxaul
09	Agave	44	Tamarind
10	Baobab	45	Wild caper
11	Boo phone	46	Wild desert gourd or colocynth
12-14	Cattail	47	Wild onion and garlic
15-19	Cereus cactus	48	Wild pistachio
20	Chufa	49	Yam bean
21-24	Common jujube	50-75	Junk Item
25	Date palm	75-99	Material chart item
26-33	Pincushion cactus	00	Random Item on other chart
34-38	Prickly pear cactus		

<b><u>Rain forest</u></b>			
01-02	Bamboo	44-47	Reed
03	Banana and plantain	48-50	Renghas tree
04	Batoko plum	51	Rose apple
05	Bignay	52	Rosary pea or crab's eyes
06	Castor bean	53-56	Sago palm
07-09	Cattail	57-61	Screw pine
10	Chinaberry	62-65	Sorghum
11	Chestnut	65-68	Strychnine tree
12-13	Cuipo tree	69	Taro
14	Daylily	70	Water chestnut
15-17	Fishtail palm	71	Water lettuce
18	Foxtail grass	72	Water lily
19	Horseradish tree	73	Water plantain
20	Poison ivy and poison oak	74	Wild dock and wild sorrel
21	Mango	75	Wild fig
22-25	Nettle	76	Wild grape vine
26-28	Nipa palm	77-83	Wild onion and garlic
29-31	Palmetto palm	84-88	Wild rice
32	Pangi	89	Yam bean
33	Papaya or pawpaw	90-93	Junk Item
34-37	Pine	94-99	Materials Chart
38	Purslane	00	Item On Another Chart
39-43	Rattan palm		

<b><u>Tropic</u></b>			
01	Acacia	41	Oleander
02	Almond	42	Orach
03	Arrowroot	43	Palmetto palm
04	Bael fruit	44	Physic nut
05	Bamboo	45	Purslane
06	Banana and plantain	46	Rattan palm
07	Baobab	47	Reed
08	Batoko plum	48	Renghas tree
09	Bignay	49	Rose apple
10	Breadfruit	50	Rosary pea or crab's eyes
11	Burl Palm	51	Sago palm
12	Canna lily	52	Sorghum
13	Cashew nut	53	Sterculia
14	Castor bean	54	Strychnine tree
15	Cattail	55	Sugarcane
16	Chinaberry	56	Sugar palm
17	Cereus cactus	57	Sugar wrack
18	Chestnut	58	Sweetsop
19	Coconut	59	Tamarind
20	Cowhage	60	Taro
21	Cuipo tree	61	Ti
22	Dandelion	62	Tree fern
23	Date palm	63	Tropical almond
24	Daylily	64	Water chestnut
25	Fishtail palm	65	Water lettuce
26	Goa bean	66	Water lily
27	Green seaweed	67	Water plantain
28	Horseradish tree	68	Wild crab apple or wild apple
29	Irish moss	69	Wild desert gourd or colocynth
30	Poison ivy and poison oak	70	Wild dock and wild sorrel
31	Juniper	71	Wild fig
32	Kelp	72	Wild grape vine
33	Lantana	73	Wild onion and garlic
34	Laver	74	Wild pistachio
35	Manchineel	75	Yam
36	Mango	76	Yam bean
37	Manioc	77-80	Driftwood
38	Mulberry	81-85	Junk Item
39	Nettle	86-99	Random Material
40	Nipa palm	00	Random Item from other chart

<b>Swamp</b>	
01 - 02 Angel Wings	48 Plantain
03 Amaranth	49 Psilocybin
04 Arrowroot	50-52 Puffball
05 - 10 Bamboo	53 Purslane
11 - 13 Cattail	54-57 Reed
14 Chanterelles	58 Reishi
15 Cranberry	59 Sassafras
16-18 Dandelion	60 Sea orach
19 Death Cap	61 Sorghum
20 Death lily	62 Spatterdock or yellow water lily
21 Elderberry	63 - 66 Poison sumac
22 False Morels	67 Tree fern
23 Fishtail palm	68 Truffle
24 Foxtail grass	69 - 72 Trumpet vine or trumpet creeper
25 Hackberry	73 Water chestnut
26 Hazelnut	74 Water hemlock or spotted cowbane
27 Hemlock, fool's parsley	75 Water lily
28 Horseradish tree	76 Wild caper
29 - 31 Poison ivy and poison oak	77 Wild dock and wild sorrel
32 Jack-O-Lantern	78 Wild fig
33 Lotus	79 Wild gourd or luffa sponge
34 Marsh marigold	80 Wild grape vine
35-37 Morels	81 - 83 Wild onion and garlic
38 Mushtake	84 - 86 Wild rice
39 Nettle	87 Yam bean
40 Nipa palm	88 - 94 Junk Item
41-43 Oak	95 - 99 Materials Chart

## **Grand Line**

Stuff in the grand line acts weird so take the above list and mix them about ignore terrain and even sometimes roll one thing on one chart and have it act like another on a whole another chart. Below However are some known things one could find.

Devil Fruit  
 Carnivorous Plants (Insects)  
 Carnivorous Plants (Plants)  
 Carnivorous Plants (Animals)  
 Mescal Cactus  
 Adam Wood

**Abal [10]****E, M**

**Description:** The abal is one of the few shrubby plants that exists in the shady deserts. This plant grows to about 1.2 meters, and its branches look like wisps from a broom. The stiff, green branches produce an abundance of flowers in the early spring months (March, April).

**Edible Parts:** [15] This plant's general appearance would not indicate its usefulness to the survivor, but while this plant is flowering in the spring, its fresh flowers can be eaten. This plant is common in the areas where it is found. An analysis of the food value of this plant has shown it to be high in sugar and nitrogenous components.

**50 Flowers      50 Reeds**

**Acacia [10]****E, M**

**Description:** Acacia is a spreading, usually short tree with spines and alternate compound leaves. Its individual leaflets are small. Its flowers are ball-shaped, bright yellow, and very fragrant. Its bark is a whitish-gray color. Its fruits are dark brown and pod like.

**Edible Parts:** [15] Its young leaves, flowers, and pods are edible raw or cooked.

**Other Uses:**[10] Spines of the tree can be crafted [10 craft weapons] to used as arrow/dart tips

**20 Leaves      50 Flowers      50 Pods      10 Spines**

**Agave [15]****E, M**

**Description:** These plants have large clusters of thick, fleshy leaves borne close to the ground and surrounding a central stalk. The plants flower only once, then die. They produce a massive flower stalk.

**Edible Parts:** [15] Its flowers and flower buds are edible. Boil them before eating.

**Other Uses:** [15] Cut the huge flower stalk and collect the juice for drinking. Some species have very fibrous leaves. Pound the leaves and remove the fibers for weaving and making ropes. Most species have thick, sharp needles at the tips of the leaves. Use them for sewing or making hacks. The sap of some species contains a chemical that makes the sap suitable for use as a soap.

Craft Alchemy [15] - Soap

**50 Flowers      50 Twine      100 Soap      100 Juice**

**Almond [10]****W,E**

**Description:** The almond tree, which sometimes grows to 12.2 meters, looks like a peach tree. The fresh almond fruit resembles a gnarled, unripe peach and grows in clusters. The stone (the almond itself) is covered with a thick, dry, woolly skin.

**Edible Parts:** [10] The mature almond fruit splits open lengthwise down the side, exposing the ripe almond nut. You can easily get the dry kernel by simply cracking open the stone. Almond meats are rich in food value, like all nuts. Gather them in large quantities and shell them for further use as survival food. You could live solely on almonds for rather long periods. When you boil them, the kernel's outer covering comes off and only the white meat remains.

**10 Wood      100 Almond**

**Aloe vera [10]**

**Description:** A small bush like plant with long thick sword like leaves growing from the root.

**Other Uses:** [10] The plant has a natural Lotion about it that has healing ability, Further processed it can be used to heal wounds [20] Heal medical issues with the heart and stomach [30] and used as a anti-Irritant [15] **Craft Chemical** - Strong Healing Salve 1d12 for 1d20 rounds [20], Moderate Cure Potion 3d8 healing [30], Removes (itching based chemicals) [15]

**100 Plant      200 Lotion      500 Healing Salve      5000 Cure Moderate Potion**

**Amaranth [10]****E**

**Description:** These plants, which grow 90 centimeters to 150 centimeters tall, are abundant weeds in many parts of the world. All amaranth have alternate simple leaves. They may have some red color present on the stems. They bear minute, greenish flowers in dense clusters at the top of the plants. Their seeds may be brown or black in weedy species and light-colored in domestic species.

**Edible Parts: [15]** All parts are edible, but some may have sharp spines you should remove before eating. The young plants or the growing tips of alder plants are an excellent vegetable. Simply boil the young plants or eat them raw. Their seeds are very nutritious. Shake the tops of alder plants to get the seeds. Eat the seeds raw, boiled, ground into flour, or popped like popcorn.

**Secondary Use - Craft Cooking [10]** Flour, [5] Popcorn  
**10 Basic Plant                      50 Flour                      100 Popcorn**

**Angle Wings [15]****P**

**Description:** A large White mushroom with a small ring on the stem.

**CAUTION [15]** The mushrooms are poisonous to eat and cause a good amount of damage in the raw doing 2d8 a round for 1d20 rounds DC 15 Fort

**Craft Alchemy - Poison [25]** 3d8 a round for 2d20 rounds DC 15 Fort  
**100 Mushroom                      20,000 Poison**

**Apple[15]****E,P,W,G**

**Description:** Most wild apples look enough like domestic apples that the survivor can easily recognize them. Apple varieties are much smaller than cultivated kinds; the largest kinds usually do not exceed 5 to 7.5 centimeters in diameter, and most often less. They have small, alternate, simple leaves and often have thorns. Their flowers are white or pink and their fruits reddish or yellowish.

**Edible Parts: [10]** Prepare Apple for eating in the same manner as cultivated kinds. Eat them fresh, when ripe, or cooked. Should you need to store food, cut the apples into thin slices and dry them. They are a good source of vitamins.

**CAUTION [15]** Apple seeds contain cyanide compounds. Do not eat.

**Craft Alchemy - Poison (30)** 2d6 a round for 2d12 minutes DC 20 Fort

**Poison in Raw** - 1d6 a round for 1d12 rounds DC 15 Fort

**100 Fruit                      5 Wood                      250 Poison                      50 Seeds for Gardening**

**Arctic willow [15]****E, W, D**

**Description:** The arctic willow is a shrub that never exceeds more than 60 centimeters in height

**Basic Use - Edible Parts: [20]** You can collect the succulent, tender young shoots of the arctic willow in early spring. Strip off the outer bark of the new shoots and eat the inner portion raw. You can also peel and eat raw the young underground shoots of any of the various kinds of arctic willow. Young willow leaves are one of the richest sources of vitamin C, containing 7 to 10 times more than an orange.

**Secondary Use - Craft Alchemy/Chemical: [20]** Vitamins (25), Cure Light Powder (15)

**10 Wood                      100 Powder                      200 Vitamin**

**Arrowroot [15]****E**

**Description:** The arrowroot is an aquatic plant with arrow-shaped leaves and potato like tubers in the mud.

**Edible Parts: [15]** The rootstock is a rich source of high quality starch. Boil the rootstock and eat it as a vegetable.

**5 Root**

**Asparagus [10]****E, D****Description:** A Bushy green plant with a strong smell to the green stalks**Edible Parts [15]** The green stems of the bush is edible.**Other Uses: [15]** The stalks are said to have a light healing property. **Craft Chemical [15]** Cure Light Wounds 1d8 Healing**150 Asparagus****200 Cure Light Wounds****Avocado [10]****W, E****Description:** A Small tree with oval dark green leaves and a dark green fruit**Edible Parts: [10]** The Fruit is edible once it has been peeled free from the leathery hide of the fruit.**150 Fruit****Bael fruit [15]****W,E****Description:** This is a tree that grows from 2.4 to 4.6 meters tall, with a dense spiny growth.

The fruit is 5 to 10 centimeters in diameter, gray or yellowish, and full of seeds.

**Edible Parts: [15]** The fruit, which ripens in December, is at its best when just turning ripe. The juice of the ripe fruit, diluted with water and mixed with a small amount of tamarind and sugar or honey, is sour but refreshing. Like other citrus fruits, it is rich in vitamin C.**10 Wood****100 Fruit****Bamboo [5]****M,W,E****Description:** Bamboos are woody grasses that grow up to 15 meters tall. The leaves are grass like and the stems are the familiar bamboo used in furniture and fishing poles.**Edible Parts: [10]** The young shoots of almost all species are edible raw or cooked. Raw shoots have a slightly bitter taste that is removed by boiling. To prepare, remove the tough protective sheath that is coated with tawny or red hairs. The seed grain of the flowering bamboo is also edible. Boil the seeds like rice or pulverize them, mix with water, and make into cakes.**Other Uses: [10]** Use the mature bamboo to build structures or to make containers, ladles, spoons, and various other cooking utensils. Also use bamboo to make tools and weapons. You can make a strong bow by splitting the bamboo and putting several pieces together.**50 Shoots****10 Wood****Banana and plantain [10]****M,W,E,G****Description:** These are treelike plants with several large leaves at the top. Their flowers are borne in dense hanging clusters.**Edible Parts: [10]** Their fruits are edible raw or cooked. They may be boiled or baked. **[15]** You can boil their flowers and eat them like a vegetable. **[20]** You can cook and eat the rootstocks and leaf sheaths of many species. **[20]** The center or "heart" of the plant is edible year-round, cooked or raw.**Other Uses:** You can use the layers of the lower third of the plants to cover coals to roast food. You can also use their stumps to get water. You can use their leaves to wrap other foods for cooking or storage. Replanting trees are possible in garden.**10 Wood****100 Fruit****5 Leaf**

**Baobab [15]****W, E, M, D**

**Description:** The baobab tree may grow as high as 18 meters and may have a trunk 9 meters in diameter. The tree has short, stubby branches and a gray, thick bark. Its leaves are compound and their segments are arranged like the palm of a hand. Its flowers, which are white and several centimeters across, hang from the higher branches. Its fruit is shaped like a football, measures up to 45 centimeters long, and is covered with short dense hair.

**Edible Parts: [15]** You can use the young leaves as a soup vegetable. The tender root of the young baobab tree is edible. The pulp and seeds of the fruit are also edible. Use one handful of pulp to about one cup of water for a refreshing drink. To obtain flour, roast the seeds, then grind them.

**Other Uses: [20]** Drinking a mixture of pulp and water will help cure diarrhea Craft medicine **[15]** Remove Disease. Often the hollow trunks are good sources of fresh water. The bark can be cut into strips and pounded to obtain a strong fiber for making rope. Craft items - Rope **[15]**

**10 Wood      150 Fruit      200 Remove Disease potion      100 Rope**

**Barley [10]****E**

**Description:** Long reeds of grass with seeds on the cap, Its green when growing but turns brown when dried

**Edible Parts: [10]** A form of Wheat that can be cooked as is and eaten, feed raw to animals for food or crushed into a fine flour Craft Cooking **[10]**

**50 Plant      100 Flour**

**Basil [10]****S**

**Description:** Basil grows to between 30–130 cm tall, with opposite, light green, silky leaves 3–11 cm long and 1–6 cm broad. The flowers are small, white in color and arranged in a terminal spike.

**50 Spice**

**Batoko plum [15]****E**

**Description:** This shrub or small tree has dark green, alternate, simple leaves. Its fruits are bright red and contain six or more seeds.

**Edible Parts: [10]** Eat the fruit raw or cooked.

**100 Fruit**

**Bayleaf [10]****S, M**

**Description:** Gardeners in frost-free or light frost areas will find that Bay Laurel seedlings planted in the ground willingly grow into large trees, 38 feet and taller; but when kept pruned the Bay Laurel tree can thrive as a small bush

**Other Uses: [15]** Can be crushed to make a fine oil (baby Oil)

**50 Spice      150 Oil**

**Bearberry [15]****E**

**Description:** This plant is a common evergreen shrub with reddish, scaly bark and thick, leathery leaves 4 centimeters long and 1 centimeter wide. It has white flowers and bright red fruits.

**Edible Parts: [5]** Its berries are edible raw or cooked.

**Secondary Use - Craft Cooking: [25]** (10) You can make a refreshing tea from its young leaves.

**150 Fruit      100 Tea**

**Beech [10]****W,M,E**

**Description:** Beech trees are large (9 to 24 meters), symmetrical forest trees that have smooth, light-gray bark and dark green foliage. The character of its bark, plus its clusters of prickly seedpods, clearly distinguish the beech tree in the field.

**Edible Parts: [15]** The mature beechnuts readily fall out of the husk like seedpods. You can eat these dark brown triangular nuts by breaking the thin shell with your fingernail and removing the white, sweet kernel inside. Beechnuts are one of the most delicious of all wild nuts. They are a most useful survival food because of the kernel's high oil content. You can also use the beechnuts as a coffee substitute. Roast them so that the kernel becomes golden brown and quite hard. Then pulverize the kernel and, after boiling or steeping in hot water, you have a passable coffee substitute.

**Craft Cooking - Coffee (15)**

**10 Wood      10 Seeds      50 Nuts      100 Coffee**

**Bignay [15]****E, P**

**Description:** Bignay is a shrub or small tree, 3 to 12 meters tall, with shiny, pointed leaves about 15 centimeters long. Its flowers are small, clustered, and green. It has fleshy, dark red or black fruit and a single seed. The fruit is about 1 centimeter in diameter.

**Edible Parts: [10]** The fruit is edible raw. Do not eat any other parts of the tree. In Africa, the roots are toxic. Other parts of the plant may be poisonous.

**Other Uses: [20]** Poison DC 20 Fort 2d6 an hour for 1d12 hours

**100 Fruit      200 Poison**

**Blackberry, raspberry, and dewberry [5]****E, D**

**Description:** These plants have prickly stems (canes) that grow upward, arching back toward the ground. They have alternate, usually compound leaves. Their fruits may be red, black, yellow, or orange.

**Edible Parts: [5]** The fruits and peeled young shoots are edible. Flavor varies greatly.

**Secondary Uses [15] - Craft Cooking (Tea 10) Chemical/Alchemy (Medicine 25)** Use the leaves to make tea. To treat diarrhea, drink a tea made by brewing the dried root bark of the blackberry bush. Tea cures disease of a Dc15 or lower, Medicine cures Disease of a DC 25

**150 Fruit      100 Tea      200 Medicine**

**Blueberry and huckleberry [10]****E**

**Description:** These shrubs vary in size from 30 centimeters to 3.7 meters tall. All have alternate, simple leaves. Their fruits may be dark blue, black, or red and have many small seeds..

**Edible Parts: [10]** Their fruits are edible raw.

**150 Fruit      50 Seeds**

**Boo phone [20]****D**

**Description:** A long flowerlike plant with tiny red long blooms

**CAUTION: [15]** The plant creates a strong amount of Hallucinations in those that eat this plant

**Other Uses: [20]** Processing the plant can create ether a strong Hallucinating drug **[20]** Will save 20 vs. Illusions, or a skilled chemist can make a pill that strengthens Mental stability **[30]** granting +10 to will saves for 1d8 hours

**100 Plant      20000 Drug      50000 Pill**

**Breadfruit [10]****W, E, M**

**Description:** This tree may grow up to 9 meters tall. It has dark green, deeply divided leaves that are 75 centimeters long and 30 centimeters wide. Its fruits are large, green, ball-like structures up to 30 centimeters across when mature.

**Edible Parts:** [10] The fruit pulp is edible raw. The fruit can be sliced, dried, and ground into flour for later use. The seeds are edible cooked.

**Other Uses:** [15] The thick sap can serve as glue and caulking material - **Craft Glue [15] Craft Chemical**. You can also use it as birdlime (to entrap small birds by smearing the sap on twigs where they usually perch). - **Craft bird lime trap [25] Craft Item**.

**10 Wood      150 Fruit      100 Seed      200 Glue      1000 Bird trap**

**Broccoli [10]****E, D**

**Description:** A small bushy plant with tiny buds within its wrapped leaves

**Edible Parts:** [10] The Full Stalk is edible yet easiest to eat when steamed.

**Other Uses:** [15] Chemists can extract the benefits from the plant and create a vitamin **Craft Alchemy [15] Vitamin**

**150 Stalk      250 Vitamin**

**Burdock [10]****W, M, E**

**Description:** This plant has wavy-edged, arrow-shaped leaves and flower heads in burr like clusters. It grows up to 2 meters tall, with purple or pink flowers and a large, fleshy root.

**Edible Parts:** [20] Peel the tender leaf stalks and eat them raw or cook them like greens. The roots are also edible boiled or baked.

**Other Uses:** [25] A liquid made from the roots will help to produce sweating and increase urination. Dry the root, simmer it in water, strain the liquid, and then drink the strained liquid. Use the fiber from the dried stalk to weave cordage. **Craft Item - Cordage (15)**

**10 Basic      50 Cordage**

**Burl Palm [15]****W, E, M**

**Description:** This tree may reach 18 meters in height. It has large, fan-shaped leaves up to 3 meters long and split into about 100 narrow segments. It bears flowers in huge clusters at the top of the tree. The tree dies after flowering.

**Edible Parts:** [20] The trunk contains starch that is edible raw. The very tip of the trunk is also edible raw or cooked. You can get large quantities of liquid by bruising the flowering stalk. The kernels of the nuts are edible.

**Other Uses:** [10] You can use the leaves as weaving material.

**10 Wood      100 Nuts      10 Leaves**

**Cabbage [10]****E, D**

**Description:** A small Leafy plant rolled up in a ball shape

**Edible Parts:** [10] The whole plant is edible yet best served cooked.

**Other Uses:** [15] Chemists can extract the benefits from the plant and create a vitamin **Craft Alchemy [15] Vitamin**, Also a weak potion with healing properties can be made as well. [20]

Cure Light Wounds

**150 Cabbage      250 Vitamin      200 Cure Light Potion**

**Cannabis/Marijuana [10]****M, D****Description:** a Small green tree like plant with five leaves.**Use:** [10] Plant can be dried and made into Hemp used to make rope.**Other Uses:** [10] Pain relief, hunger stimulation, wasting caused by HIV/AIDS, Glaucoma, nausea**CAUTION [10]**

This plant when used as a drug it can carry addictive qualities Will Save DC 15+ (the + is based off how many/ much the character has used recently)

**Craft Item - Rope (10)****Craft Alchemy - Medicine / Drug (10)** Heals 2d8 damage and removes fatigue, drawback causes addiction also grants player a hunger and they must eat x3 their normal food for 1 day**10 Hemp Leaves      100 Rope      1000 Drug****Canna lily [15]****E****Description:** The canna lily is a coarse perennial herb, 90 centimeters to 3 meters tall. The plant grows from a large, thick, underground rootstock that is edible. Its large leaves resemble those of the banana plant but are not so large. The flowers of wild canna lily are usually small, relatively inconspicuous, and brightly colored reds, oranges, or yellows.**Edible Parts:** [20] The large and much branched rootstocks are full of edible starch. The younger parts may be finely chopped and then boiled or pulverized into a meal. Mix in the young shoots of palm cabbage for flavoring.**5 Root      100 Flowers****Carob tree [15]****W, E****Description:** This large tree has a spreading crown. Its leaves are compound and alternate. Its seedpods, also known as Saint John's bread, are up to 45 centimeters long and are filled with round, hard seeds and a thick pulp.**Edible Parts:** [15] The young tender pods are edible raw or boiled. You can pulverize the seeds in mature pods and cook as porridge.**50 Pods****Carrot [10]****E****Description:** A small White flower covered stalk with bushy leaves.**Edible Parts:** The root of the carrot is one of the healthiest food that can be eaten raw or cooked**150 Carrot****Cashew nut [10]****E, P, W****Description:** The cashew is a spreading evergreen tree growing to a height of 12 meters, with leaves up to 20 centimeters long and 10 centimeters wide. Its flowers are yellowish-pink. Its fruit is very easy to recognize because of its peculiar structure. The fruit is thick and pear shaped, pulpy and red or yellow when ripe. This fruit bears a hard, green, kidney-shaped nut at its tip. This nut is smooth, shiny, and green or brown according to its maturity.**Edible Parts:** [10] The nut encloses one seed. The seed is edible when roasted. The pear-shaped fruit is juicy, sweet-acid, and astringent. It is quite safe and considered delicious by most people who eat it.**CAUTION [20]:** The green hull surrounding the nut contains a resinous irritant poison that will blister the lips and tongue like poison ivy. Heat destroys this poison when roasting the nuts. - Craft Chemicals DC 20 to make Itching Powder doing 2d4 damage an hour for 1d8 hours**10 Wood      200 Nuts      150 Itching Powder**

**Castor bean [15]****D, P**

**Description:** The castor bean is a semi woody plant with large, alternate, star like leaves that grows as a tree in tropical regions and as an annual in temperate regions. Its flowers are very small and inconspicuous. Its fruits grow in clusters at the tops of the plants.

**CAUTION [15]**

All parts of the plant are very poisonous to eat. The seeds are large and may be mistaken for a beanlike food.

**Poison in the Raw** - Does 1d6 a hour for 1d12 hours

**Craft Alchemy - Poison (20)** does 2d6 a hour for 1d12 hours,

**Oil (20)** Removes disease of DC 25

**500 Poison      1000 Oil**

**Catnip [15]****D**

**Description:** Catnip is a 50–100 cm tall perennial herb resembling mint in appearance, with grayish-green leaves; the flowers are white, finely spotted with purple

**Other Uses:[25]** Catnip Soothes coughs

**Craft Alchemy - Medicine (20)** Cure Light Potion Heals 1d8 damage

**50 Plant            200 Cure Light**

**Cattail [5]****M, E**

**Description:** Cattails are glasslike plants with strap-shaped leaves 1 to 5 centimeters wide and growing up to 1.8 meters tall. The male flowers are borne in a dense mass above the female flowers. These last only a short time, leaving the female flowers that develop into the brown cattail. Pollen from the male flowers is often abundant and bright yellow.

**Edible Parts: [15]** The young tender shoots are edible raw or cooked. The rhizome is often very tough but is a rich source of starch. Pound the rhizome to remove the starch and use as a flour. The pollen is also an exceptional source of starch. When the cattail is immature and still green, you can boil the female portion and eat it like corn on the cob.

**Other Uses: [10] Craft Items - Weaving Nets (10), Raft (20) Stuffing (10)** The dried leaves are an excellent source of weaving material you can use to make floats and rafts. The cottony seeds make good pillow stuffing and insulation. The fluff makes excellent tinder. Dried cattails are effective insect repellents when burned.

**10 Reed            150 Net            3000 Raft            50 Stuffing**

**Cayenne pepper [15]****E,S,D**

**Description:** A small bush with little red fruit.

**Edible Parts: [10]** The fruit is Edible but ill advised as its incredibly spicy

**Other Uses: [20]** the juice can be used to create a form of mace to spray in the eyes. Also the plant can be dried and ground into a spice

**Craft Alchemy - Mace (20)** liquid causes blindness DC 20 Fort vs. Blindness

**Craft Cooking - Pepper (10)**

**150 Fruit            2000 Mace            100 Pepper**

**Celery [10]****E, D**

**Description:** Long stems collected at a based root with broad green leaves, the stems have a u shape to them

**Edible parts:** The Stems are Edible and even used as a dull spice in cooking

**Other Uses:** The seeds can be used to craft what some believe to be a love Potion. **Craft Alchemy [20]** A more skilled hand can make a decent healing potion from them **[30]** Cure Moderate Wounds 3d8.

**150 Stalks            5000 Seeds            10,000 Love Potion            5000 Cure Moderate Wounds**

**Cereus cactus [10]****E****Description:** These cacti are tall and narrow with angled stems and numerous spines.**Edible Parts:** [10] The fruits are edible, but some may have a laxative effect.**Other Uses:** [15] The pulp of the cactus is a good source of water. Break open the stem and scoop out the pulp.**100 Fruit      5 Water****Chamomile [15]****S,D****Description:** Daisy like flowering plants**Edible Parts:** [15] The key plant in making Tea from its leaves**Other Uses:** [20] Chamomile Relaxant/Calmativ**Craft Cooking - Tea (10), Craft Alchemy - Sleep powder (20) Will Save DC 15 vs. Fatigue****50 Flower      100 Tea      200 Sleep powder****Chanterelles [15]****Description:** A shelf like Mushroom growing in clusters**Edible Parts:** [15] All parts are edible and often used to mix in with meat like chicken to add flavor to the meat or even added to scrambled eggs.**200 Mushroom****Cherry, Plum, Apricot [10]****W,E,P,M,D****Description:** A massive flowering tree that has pink/white/ Purple blossoms depending on the type of fruit it bears. These trees are said to be symbols of time and mystical in their properties. After the bloom falls it builds into a fruit some small red, others Yellow and some purple.**Edible Parts:** [10] The fruit of the tree is edible and sought as a delicious flavor. The flowers are also edible in moderation. They can also be used to process a weak liquor. (Craft Cooking DC 20 Liquor) The Wood is also said to burn the flowers sweet smell into food.**CAUTION [15]** A large dosage of the flower can cause illness DC 10 Fort vs. Sickness**Other Uses:** [15] The Flowers are widely sought for both their beauty and smell thus making a perfume or fine powder is often sought by those with great wealth. (Craft Chemical DC 15 Perfume/ Powder) The Extract of the fruit is often used to make bitter medicine be easier to take (Craft Chemical DC 10 Potion Boost adds players level to the potion made)**10 Wood      150 Fruit      750 Liquor      2000 Perfume/ Powder 1000 Potion Boost  
500 Flower      50 pit for planting****Chicory [15]****E,M****Description:** This plant grows up to 1.8 meters tall. It has leaves clustered at the base of the stem and some leaves on the stem. The base leaves resemble those of the dandelion. The flowers are sky blue and stay open only on sunny days. Chicory has a milky juice.**Edible Parts:** [15] All parts are edible. Eat the young leaves as a salad or boil to eat as a vegetable. Cook the roots as a vegetable. For use as a coffee substitute, roast the roots until they are dark brown and then pulverize them.**Craft Cooking - Coffee (15)****10 Plant      100 Coffee****Chestnut [10]****E, W****Description:** The European chestnut is usually a large tree, up to 18 meters in height.**Edible Parts:** [10] Chestnuts are highly useful as survival food. Ripe nuts are usually picked in autumn, although unripe nuts picked while green may also be used for food. Perhaps the easiest way to prepare them is to roast the ripe nuts in embers. Cooked this way, they are quite tasty, and you can eat large quantities. Another way is to boil the kernels after removing the outer shell. After being boiled until fairly soft, you can mash the nuts like potatoes.**10 Wood      200 Nuts**

**Chili pepper [10]****E,S,M****Description:** The fruit is eaten raw or cooked for its fiery hot flavor, concentrated along the top of the pod. The stem end of the pod has most of the glands that produce the capsaicin**Other Uses: [15]** The capsaicin can be used as a medical to cure pain and also can be used to make a mace**Craft Alchemy - Mace (15), Pain Medicine (25)** Heals 1d8 Damage and numbs pain**50 Fruit      100 Chili Powder      2000 Mace      500 Medicine****Chufa [15]****E,M****Description:** This very common plant has a triangular stem and glasslike leaves. It grows to a height of 20 to 60 centimeters. The mature plant has a soft fur like bloom that extends from a whorl of leaves. Tubers 1 to 2.5 centimeters in diameter grow at the ends of the roots.**Edible Parts: [15]** The tubers are edible raw, boiled, or baked. You can also grind them and use them as a coffee substitute.**Craft Cooking - Coffee (15)****50 Grass reeds      100 Coffee****Clove [10]****S,M****Description:** The English name derives from Latin *ca/ves* 'nail' as the buds vaguely resemble small irregular nails in shape.**Other Uses: [20]** Clove is used in place of tobacco for smoking**50 Clove      100 Four Leaf Clover      150 Smoking Tobacco****Cocoa Bean [15]****E, W, D****Description:** A small tree with a Leathery Reddish yellow pod and broad dark green leaves.**Edible Parts: [15]** The plant is not edible but once the pods are fermented and cooked they become [10] **Craft Cooking** Cocoa powder which can be turned around and used to make Chocolate [15] **Craft Cooking****Other Uses: [15]** It is widely known that the chocolate has healing properties, the powder can be crafted into a potion of light healing. [15] **Craft Alchemy** Cure Light Potion**100 Cocoa Powder      200 Chocolate      250 Hot Chocolate      200 Cure Light Wounds  
10 Wood****Coconut [5]****W, E, M, D****Description:** This tree has a single, narrow, tall trunk with a cluster of very large leaves at the top. Each leaf may be over 6 meters long with over 100 pairs of leaflets.**Edible Parts: [5]** The nut is a valuable source of food. The milk of the young coconut is rich in sugar and vitamins and is an excellent source of liquid. The nut meat is also nutritious but is rich in oil. To preserve the meat, spread it in the sun until it is completely dry.**Other Uses: [15]** Use coconut oil craft DC [10] **Chemical** to cook and to protect metal objects from corrosion. Also use the oil to treat saltwater sores, sunburn, and dry skin. Use the oil in improvised torches. Use the tree trunk as building material and the leaves as thatch. Hollow out the large stump for use as a food container. The coconut husks are good flotation devices and the husk's fibers are used to weave ropes and other items. Use the gauzelike fibers at the leaf bases as strainers or use them to weave a bug net or to make a pad to use on wounds. The husk makes a good abrasive. Dried husk fiber is an excellent tinder. A smoldering husk helps to repel mosquitoes. Smoke caused by dripping coconut oil in a fire also repels mosquitoes. To render coconut oil, put the coconut meat in the sun, heat it over a slow fire, or boil it in a pot of water. Coconuts washed out to sea are a good source of fresh liquid for the sea survivor.**10 Wood      100 Coconut      5 husk      50 Oil cooking      100 oil medicine      100 rope**

**Coffee Bean [15]****W, E****Description:** A Small Woody Tree with Pinkish to purple pods, and broad oval leaves.**Edible Parts: [10]** The pods are difficult and unadvised to eat until they are roasted to make a bean. The bean can then be grounded and processed into a cup of coffee **[15] Craft Cooking****100 Coffee 10 Wood****Common jujube [10]****W, E****Description:** The common jujube is either a deciduous tree growing to a height of 12 meters or a large shrub, depending upon where it grows and how much water is available for growth. Its branches are usually spiny. Its reddish-brown to yellowish-green fruit is oblong to ovoid, 3 centimeters or less in diameter, smooth, and sweet in flavor, but has rather dry pulp around a comparatively large stone. Its flowers are green.**Edible Parts: [10]** The pulp, crushed in water, makes a refreshing beverage. If time permits, you can dry the ripe fruit in the sun like dates. Its fruits are high in vitamins A and C.**150 Fruit 10 Wood****Corn [10]****E, M****Description:** A tall green stalk with large leafy pods holding a yellow seed covered cob.**Edible Parts: [10]** Eaten raw or cooked the Corn is a great source of many foods, It can be crushed into a powder **[10] Craft Cooking** - Corn Meal, Or the seeds can be dried and rolled in oil to later be popped into popcorn **[15] Craft Cooking** - Popcorn.**Other Uses: [15]** The uses of the corn are practically endless but the main ones are it can be boiled down to a fuel source **Craft Chemicals [20]** Ethanol and Also the seeds can be dried out then used as animal feed. The cob can also be used to craft items as well.**150 Corn 200 Popcorn 150 Corn Meal 20,000 Ethanol 100 Feed****Cotton [10]****M****Description:** A small reedy plant that woody and bears a fine white material over hard pointy seeds.**Other Uses: [10]** The fine white material can be processed into yarn or string for sewing (Craft Items 10 Yarn, 15 String) The seed can be used as a sharp barb in sling shots or slings.

Crushing the seeds produces a oil that can be used in cooking (Craft Cooking 10 Cooking Oil)

**50 Seeds 50 Cotton Ball 250 Yarn 500 String 1000 Oil****Cowage [15]****M, D, E, P****Description:** A vine like plant that grows about trees and other plants with pea like beans as its fruit.**Edible Parts [20]:** Boil and roast the peas to make a coffee like drink.**Caution: [20]** Eating the beans raw are poisonous (DC 20 2d6 an hour for 1d12 hours)**Other Uses: [20]** As always the vine of the plant works as a rope replacement on its own but grinding the beans once roasted and boiled they can be made into a aphrodisiac or antidepressant. (craft chemical DC 20 antidepressant, DC 30 aphrodisiac Will Save DC 20)**10 Coffee Bean 100 Coffee 2500 antidepressant 5000 love potion 50 Vine****Cranberry [10]****D, E****Description:** This plant has tiny leaves arranged alternately. Its stem creeps along the ground. Its fruits are red berries.**Edible Parts:[10]** The berries are very tart when eaten raw. Cook in a small amount of water and add sugar, if available, to make a jelly.**Other Uses:[20]** Cranberries may act as a diuretic. They are useful for treating urinary tract infections. **Craft Alchemy - Medicine (25)** Cure Disease potion**150 Fruit 100 Cooked product 200 Cure Disease Potion**

**Crowberry [15]****D, E**

**Description:** This is a dwarf evergreen shrub with short needlelike leaves. It has small, shiny, black berries that remain on the bush throughout the winter.

**Edible Parts:** [15] The fruits are edible fresh or can be dried for later use.

**150 Fruit**

**Cucumber [10]****E**

**Description:** A Small Ground Vine with little yellow flowers and Small greenish gourds

**Edible Parts:** [10] The gourds are eaten raw or pickled [15] **Craft Cooking**

**150 Fruit      200 Pickles**

**Cuipo tree [10]****W, M**

**Description:** This is a very dominant and easily detected tree because it extends above the other trees. Its height ranges from 45 to 60 meters. It has leaves only at the top and is bare 11 months out of the year. It has rings on its bark that extend to the top to make it easily recognizable. Its bark is reddish or gray in color. Its roots are light reddish-brown or yellowish brown.

**Edible Parts:** [15] To get water from this tree, cut a piece of the root and clean the dirt and bark off one end, keeping the root horizontal. Put the clean end to your mouth or canteen and raise the other. The water from this tree tastes like potato water.

**Other Uses:** [15] Use young saplings and the branches' inner bark to make rope.

**10 Wood      10 Rope**

**Dandelion [5]****M, E**

**Description:** Dandelion leaves have a jagged edge, grow close to the ground, and are seldom more than 20 centimeters long. Its flowers are bright yellow. There are several dandelion species

**Edible Parts:** [10] All parts are edible. Eat the leaves raw or cooked. Boil the roots as a vegetable. Roots roasted and ground are a good coffee substitute. Dandelions are high in vitamins A and C and in calcium.

**Other Uses:** [20] Use the white juice in the flower stems as glue. **Craft Alchemy - Glue (15)**

**10 Flower      100 Glue**

**Date palm [10]****W, E, M**

**Description:** The date palm is a tall, unbranched tree with a crown of huge, compound leaves. Its fruit is yellow when ripe.

**Edible Parts:** [10] Its fruit is edible fresh but is very bitter if eaten before it is ripe. You can dry the fruits in the sun and preserve them for a long time.

**Other Uses:** [10] The trunks provide valuable building material in desert regions where few other treelike plants are found. The leaves are durable and you can use them for thatching and as weaving material. The base of the leaves resembles coarse cloth that you can use for scrubbing and cleaning.

**10 Wood      150 Fruit      10 leaves**

**Daylily [10]****E**

**Description:** This plant has unspotted, tawny blossoms that open for 1 day only. It has long, sword-like, green basal leaves. Its root is a mass of swollen and elongated tubers.

**Edible Parts:** [15] The young green leaves are edible raw or cooked. Tubers are also edible raw or cooked. You can eat its flowers raw, but they taste better cooked. You can also fry the flowers for storage.

**150 Tuber      50 Flower**

**Death Cap [20]****P****Description:** A large top with bright colors and a tall stalk**Caution:** [20] Looking similar to many edible mushrooms it causes the liver to breakdown and be destroyed. It is one of the highly deadliest mushrooms in the world 3d8 a round for 2d20 rounds Fort DC 25, Processing the poison has shown no real effect**100 Mushroom****Death camas, death lily [15]****P****Description:** This plant arises from a bulb and may be mistaken for an onion like plant. Its leaves are grass like. Its flowers are six-parted and the petals have a green, heart-shaped structure on them. The flowers grow on showy stalks above the leaves.**CAUTION [25]**

All parts of this plant are very poisonous. Death camas does not have the onion smell.

**Craft Alchemy - Poison (25)** the poison does 2d8 a round damage for 1d12 minutes Fort DC 15**Poison Raw** - 1d8 damage a round for 1d6 minutes Fort DC 15**10 Plant 200 poison****Dill seed [15]****E,S,D****Description:** It grows to 40–60 cm (16–24 in), with slender stems and alternate, finely divided, softly delicate leaves 10–20 cm (3.9–7.9 in) long**Other Uses:** [20] Dill and Dill oil used to soothe the stomach after meals**Craft Alchemy - Oil (15)** heals disease of DC 15 or less**50 Dill 150 Oil****Duchesnea or Indian strawberry [10]****E****Description:** The duchesnea is a small plant that has runners and three-parted leaves. Its flowers are yellow and its fruit resembles a strawberry.**Edible Parts:** [10] Its fruit is edible. Eat it fresh.**100 Fruit****Elderberry [10]****E****Description:** Elderberry is a many-stemmed shrub with opposite, compound leaves. It grows to a height of 6 meters. Its flowers are fragrant, white, and borne in large flat-topped clusters up to 30 centimeters across. Its berrylike fruits are dark blue or black when ripe.**Edible Parts:**[15] The flowers and fruits are edible. You can make a drink by soaking the flower heads for 8 hours, discarding the flowers, and drinking the liquid.**Craft Cooking - Wine (20)****50 Fruit 300 Wine****False Morels [15]****E,P****Description:** A large solitary mushroom with sponge like head.**CAUTION:** [15] Eating the mushrooms raw can cause one to get sick doing 1d8 damage a round for 1d20 rounds. DC 15 Fort**Other Uses:** [20] Processing the poison from the mushrooms creates a powerful Rocket fuel source. **Craft Chemical [35]** - Rocket Fuel**100 Mushroom 30,000 Rocket Fuel****Fireweed [10]****E****Description:** This plant grows up to 1.8 meters tall. It has large, showy, pink flowers and lance shaped leaves. Its relative, the dwarf fireweed (*Epilobium latifolium*), grows 30 to 60 centimeters tall.**Edible Parts:**[20] The leaves, stems, and flowers are edible in the spring but become tough in summer. You can split open the stems of old plants and eat the pith raw.**10 Plant**

**Fishtail palm [10]****W, E**

**Description:** Fishtail palms are large trees, at least 18 meters tall. Their leaves are unlike those of any other palm; the leaflets are irregular and toothed on the upper margins. All other palms have either fan-shaped or featherlike leaves. Its massive flowering shoot is borne at the top of the tree and hangs downward.

**Edible Parts: [20]** The chief food in this palm is the starch stored in large quantities in its trunk. The juice from the fishtail palm is very nourishing and you have to drink it shortly after getting it from the palm flower shoot. Boil the juice down to get a rich sugar syrup. Use the same method as for the sugar palm to get the juice. The palm cabbage may be eaten raw or cooked. **Craft**

**Cooking [15]** Sugar

**10 Wood          200 Sugar          10 Juice**

**Foxtail grass [15]****E**

**Description:** This weedy grass is readily recognized by the narrow, cylindrical head containing long hairs. Its grains are small, less than 6 millimeters long. The dense heads of grain often droop when ripe.

**Edible Parts: [15]** The grains are edible raw but are very hard and sometimes bitter. Boiling removes some of the bitterness and makes them easier to eat.

**10 Grains**

**Fenugreek [15]****D, S**

**Description:** A seedy clover like plant. Used both as a herb and a Spice (makes curry)

**Other Uses: [20]** Can be used to promote milk production in women and crafted into a natural hormone it also can be used to make a low cost maple syrup.

**Craft Cooking - Syrup (15), Craft Alchemy - Hormones (20)**

**50 Plant          150 Syrup          2000 Hormone**

**Garlic [10]****E, G, M, D**

**Description:** *Allium cernuum* is an example of the many species of garlic.

**Edible Parts: [10]** The bulbs and young leaves are edible raw or cooked. Use in soup or to flavor meat.

**Other Uses: [15]** Garlic juice works as an antibiotic on wounds

**Craft Alchemy - Cure Light Potion(10, 20)** Cure Light does 1d8 healing

**50 Onion/ Garlic          50 Seeds for planting          200 Cure light potion**

**Goa bean [15]****E**

**Description:** The Goa bean is a climbing plant that may cover small shrubs and trees. Its bean pods are 22 centimeters long, its leaves 15 centimeters long, and its flowers are bright blue. The mature pods are 4-angled, with jagged wings on the pods.

**Edible Parts: [15]** You can eat the young pods like string beans. The mature seeds are a valuable source of protein after parching or roasting them over hot coals. You can germinate the seeds (as you can many kinds of beans) in damp moss and eat the resultant sprouts. The thickened roots are edible raw. They are slightly sweet, with the firmness of an apple. You can also eat the young leaves as a vegetable, raw or steamed.

**150 Beans          5 Leaves**

**Ginger [10]****E,D**

**Description:** Ginger produces clusters of white and pink flower buds that bloom into yellow flowers

**Other Uses: [20]** Ginger can help ease nausea from chemotherapy

**Craft Alchemy - Remove Disease Medicine (20)** removes DC 20 and lower disease

**50 Root          1000 Remove Disease Medicine**

**Ginseng [15]****D**

**Description:** also known as Ginnsuu in some regions of Asia, mainly China, is any one of eleven distinct species of slow-growing perennial plants with fleshy roots

**Other Uses: [20/25]** Aids digestion, cures hepatitis C, lowers blood pressure, increases stamina.

**Craft Alchemy - Stamina Booster (20)** grants +2 to Spot, Listen and to hit rolls for 1d6 hours,

**Healing Potion (25)** Heals 2d8

**50 Root****2000 Stamina Booster****1500 Healing Potion****Grape vine [10]****E,M**

**Description:** The grape vine climbs with the aid of tendrils. Most grape vines produce deeply lobed leaves similar to the cultivated grape. Grapes grow in pyramidal, hanging bunches and are black-blue to amber, or white when ripe.

**Edible Parts: [10]** The ripe grape is the portion eaten. Grapes are rich in natural sugars and, for this reason, are much sought after as a source of energy-giving wild food. None are poisonous.

**Other Uses: [20]** You can obtain water from severed grape vine stems. Cut off the vine at the bottom and place the cut end in a container. Make a slant-wise cut into the vine about 1.8 meters upon the hanging part. This cut will allow water to flow from the bottom end. As water diminishes in volume, make additional cuts further down the vine.

**Craft Cooking - Wine (20)**

**100 Fruit****300 Wine****Grapefruit [10]****E,D,W**

**Description:** These evergreen trees are usually found at around 5–6 meters (16–20 ft) tall, although they can reach 13–15 meters (43–49 ft). The leaves are dark green, long (up to 150 mm, or 6 inches) and thin. It produces 5 cm (2 in) white four-petal flowers. The fruit is yellow-orange skinned and largely an sphere shaped fruit; it ranges in diameter from 10–15 cm. The flesh is segmented and acidic, varying in color depending on the cultivars, which include white, pink and red pulps of varying sweetness.

**Edible Parts: [5]** The fruit is edible

**Other Uses: [10]** The high content of Vitamin C in this fruit makes it a great source to be used in creating a vitamin to help fight off diseases (Craft Chemical, DC 15, Vitamin Grants +5 Fort Vs Disease per day)

**150 Fruit****10 Wood****200 Vitamin****Green Bean [5]****E**

**Description:** Short plants, growing to approximately two feet in height, without requiring supports. They generally reach maturity and produce all of their fruit in a relatively short period of time, then cease to produce. Gardeners may grow more than one crop of bush beans in a season.

**Edible Parts: [5]** The Beans pods of the plant are edible cooked or even eaten raw

**100 Bean Pod****50 Seeds for Planting****Green Pepper [5]****E**

**Description:** A small Vine-like plant with Large green fruit in the form of a bell

**Edible Parts: [5]** The fruit is edible and often when its green its considered to be best eaten raw but can be cooked as well

**100 Bell Pepper****50 Seeds for planting**

**Green seaweed [5]****E,D**

**Description:** Most common type of seaweed in the world, often found washing ashore but can be found in tidal pools and calmer ocean waters. It contains high amounts of Iodine, Calcium, and Magnesium.

**Edible Parts:** [5] The whole plant is edible as long as its boiled and/or baked.

**Other Uses:** [15] Boiling the plant produces Iodine which can be used to clean and treat injuries, burning it to a powder creates a calcium powder also good for medical treatments of bone fractures. (Craft chemical, DC 20 Iodine salve heals 2d8, DC 15 Calcium Powder reduces time on healing bones by 1d6 days)

**50 Seaweed                      1500 Iodine Salve                      500 Calcium Powder**

**Hackberry [15]****W,E**

**Description:** Hackberry trees have smooth, gray bark that often has corky warts or ridges. The tree may reach 39 meters in height. Hackberry trees have long-pointed leaves that grow in two rows. This tree bears small, round berries that can be eaten when they are ripe and fall from the tree. The wood of the hackberry is yellowish.

**Edible Parts:** [10] Its berries are edible when they are ripe and fall from the tree.

**150 Fruit                      10 Wood**

**Hazelnut or wild filbert [10]****W,E**

**Description:** Hazelnuts grow on bushes 1.8 to 3.6 meters high. One species in Turkey and another in China are large trees. The nut itself grows in a very bristly husk that conspicuously contracts above the nut into a long neck. The different species vary in this respect as to size and shape.

**Edible Parts:** [10] Hazelnuts ripen in the autumn when you can crack them open and eat the kernel. The dried nut is extremely delicious. The nut's high oil content makes it a good survival food. In the unripe stage, you can crack them open and eat the fresh kernel.

**150 Nuts                      10 Wood**

**Hemlock, fool's parsley [20]****P**

**Description:** This biennial herb may grow to 2.5 meters high. The smooth, hollow stem may or may not be purple or red striped or mottled. Its white flowers are small and grow in small groups that tend to form flat umbels. Its long, turnip like taproot is solid.

**Caution [20]** This plant is very poisonous and even a very small amount may cause death. This plant is easy to confuse with wild carrot or Queen Anne's lace, especially in its first stage of growth. Wild carrot or Queen Anne's lace has hairy leaves and stems and smells like carrot. Poison hemlock does not.

**Craft Alchemy - Poison (20)** - the poison does 2d8 a round damage over 1d12 minutes. Fort DC 25

**Poison Raw** 1d8 a round damage over 1d6 minutes Fort DC 20

**10 Plant                      200 Poison**

**Hops [15]****E,M**

**Description:** The female flowers (often called "cones") of *H. lupulus* are known as hops, and are used as a culinary flavoring and stabilizer, especially in the brewing of beer

**Other Uses:** [15/10] The hops can be ground up and become a flour, or boiled to make Ale, Also can be used to make a sleep aid

**Craft Alchemy - Sleep Powder (15)** Will Save DC 15+5 for every 5 over the craft limit,

**Craft Cooking - Ale/Beer (20)**

**50 Grain                      200 Sleep Powder                      1000 Ale/Beer**

**Horseradish tree [10]****W, E, S**

**Description:** This tree grows from 4.5 to 14 meters tall. Its leaves have a fernlike appearance. Its flowers and long, pendulous fruits grow on the ends of the branches. Its fruit (pod) looks like a giant bean. Its 25-to 60-centimeter-long pods are triangular in cross section, with strong ribs. Its roots have a pungent odor.

**Edible Parts:** The leaves are edible raw or cooked, depending on their hardness. Cut the young seedpods into short lengths and cook them like string beans or fry them. You can get oil for frying by boiling the young fruits of palms and skimming the oil off the surface of the water. You can eat the flowers as part of a salad. You can chew fresh, young seedpods to eat the pulpy and soft seeds. The roots may be ground as a substitute for seasoning similar to horseradish. (craft cooking 15 - Horseradish)

**10 Wood      5 Leaves      50 Pods      100 Flowers      100 Seeds      5 Root**  
**200 Horseradish**

**Iceland moss [15]****E, M**

**Description:** This moss grows only a few inches high. Its color may be gray, white, or even reddish.

**Edible Parts:** [20] All parts of the Iceland moss are edible. During the winter or dry season, it is dry and crunchy but softens when soaked. Boil the moss to remove the bitterness. After boiling, eat by itself or add to milk or grains as a thickening agent [20]. Dried plants store well.

**Craft Cooking - Thickener (20)**

**10 Moss      150 Thickener**

**Indian potato or Eskimo potato [15]****E**

**Description:** All Claytonia species are somewhat fleshy plants only a few centimeters tall, with showy flowers about 2.5 centimeters across.

**Edible Parts:** [15] The tubers are edible but you should boil them before eating.

**150 Potato**

**Indonesian Cinnamon [15]****S, W**

**Description:** is a small evergreen tree belonging to the family, the spice obtained from the tree's bark

**Spice: [15]**

**100 Cinnamon      10 Wood**

**Irish moss [5]****E,D**

**Description:** A greenish, yellow and purple seaweed found through the tidal pools and calmer waters of the ocean, the plant carries strong amounts of iodine and sulfur within its stems.

**Edible Parts:** [10] The whole plant is edible once boiled or baked.

**Other Uses:** [15] Boiling the plant can produce iodine which can be used to clean and treat wounds. Burning it to ash can create a sulfur powder that can be used to create a chemical stink bomb or flash powder. (Craft chemical, DC 20 Iodine salve heals 2d8, DC 15 Stink Bomb DC 15 fort vs. sick, DC 25 Flash Powder)

**50 Seaweed      1500 Iodine Salve      200 Stink Bomb      500 Flash powder**

**Poison ivy and poison oak [15] P, D**

**Description:** These two plants are quite similar in appearance and will often crossbreed to make a hybrid. Both have alternate, compound leaves with three leaflets. The leaves of poison ivy are smooth or serrated. Poison oak's leaves are lobed and resemble oak leaves. Poison ivy grows as a vine along the ground or climbs by red feeder roots. Poison oak grows like a bush. The greenish white flowers are small and inconspicuous and are followed by waxy green berries that turn waxy white or yellow, then gray.

**CAUTION [15]** All parts, at all times of the year, can cause serious contact dermatitis.

**Craft Alchemy - Poison (20)** Itching Powder 1d12 damage for 1d12 hours DC 20 Fort

**Poison Raw** - Causes rash that does 1d4 damage a day for 1d6 days DC 20 Fort

**10 Plant 1000 Itching Powder**

**Jack-O-Lantern [15] P**

**Description:** A shelf like Mushroom found in clumps on trees. Bright Orange in color.

**CAUTION [15]** While Not deadly the mushroom causes great pain and sickness. DC 20 Fort vs. Illness

**Other Uses: [25]** A very skilled Chemist can make a Strong Healing Potion but its very difficult to weed out the poison. **Craft Chemical [35]** - Cure Sever Wounds 5d8

**50 Mushroom 100,000 Cure Sever Wounds**

**Jasmine [10] S,M,E**

**Description:** Small shrubs or vines that grow olive like flowers

**Other Uses: [10]** Jasmine can be made in to a fine perfume that is well loved

**Spice: [10]**

**Craft Alchemy - Perfume (20)**

**50 Flower 5000 Perfume**

**Juniper [15] W,E,M**

**Description:** Junipers, sometimes called cedars, are trees or shrubs with very small, scale like leaves densely crowded around the branches. Each leaf is less than 1.2 centimeters long. All species have a distinct aroma resembling the well-known cedar. The berrylike cones are usually blue and covered with a whitish wax.

**Edible Parts: [15]** The berries and twigs are edible. Eat the berries raw or roast the seeds to use as a coffee substitute. Use dried and crushed berries as a seasoning for meat. Gather young twigs to make a tea.

**Other Uses: [10]** Sap can be used as a Resin or glue

**Craft Cooking - Tea (10), Coffee (15), Craft Alchemy - Glue (10)**

**150 Fruit 10 Wood 100 Tea 100 Coffee 100 Glue**

**Kale, Spring Lettuce, Collards [10] E,D**

**Description:** Green or purple, in which the central leaves do not form a head. It is considered to be closer to wild cabbage than most domesticated forms

**Edible Parts: [10]** The entire leaf is edible raw or cooked it is mainly eaten cooked

**Other Uses: [20]** The vitamins in this plant while not useful on its own can be used to boost healing potions into doing a greater amount (Craft Chemical DC 25, Potion Boost, grants Potion a level bonus based on its crafter)

**100 Plant 2000 Potion Boost**

**Kelp [5] E,D**

**Description:** A large seaweed found in vast areas of ocean.

**Edible Parts: [5]** The whole plant is edible once boiled

**Other Uses: [15]** Once the plant is burned to ash the ash is the chemical Sodium Carbonate Which has many medical uses (DC 20 Craft Chemical - Sodium Carbonate Pill Heals Sickness DC 15)

**50 Plant 500 Sodium Carbonate Pill**

**Lavender [10]****S,E,M,D****Description:** are a genus of 39 species of flowering plants in the mint family known for their purple flowers**Other Uses: [15]** Lavender is used for its smell as a perfume, but also is used as a relaxation drug**Craft Alchemy - Perfume (20), Relax Drug (25)** removes Berserk, rage or fear status and grants a -2 to hit and saves**50 Flower      5000 Perfume   2000 Relax Drug****Lemon [10]****E,W,D,M****Description:** a small evergreen tree native to Asia, and the tree's oval yellow fruit.**Edible Parts: [5]** The fruit of the plant is edible all be it very bitter. It can be made into candy served to flavor foods even made into fruit juice.**Other Uses: [10]** Healing properties of the lemon juice can cure sores and wounds (craft chemical, DC 15 Cure Light wounds Potion) The Strong vitamin content can be used to make Vitamins (Craft Chemical, DC 15, Vitamin Grants +5 Fort Vs Disease per day) The Juice can be made into a simple weak acid spray that deters bugs (Craft Chemical DC 15 Insecticide) and lastly the Juice holds strong germ cleansing properties (Craft Chemical DC 10 Cleaning Fluid)**10 Wood      150 Fruit      200 Vitamin   100 Cure Light Wounds

It is most often grown as a leaf vegetable.**Edible Parts: [10]** The plant is fully edible raw and is often eaten that way.**100 Plant****Licorice, Liquorice [15]****S,E,D****Description:** A small fern like plant with pods**Other Uses: [15]** As well as a spice, Licorice has been use through out time as a healing plant for coughs and soars**Craft Alchemy - Healing Salve (15)** 1d8 for 1d12 rounds**50 Pods      2500 Salve****Lime [10]****W,E,M****Description:** a small evergreen tree native to Asia, and the tree's oval green fruit.**Edible Parts: [5]** The fruit is edible raw and can be made into candy, flavoring or even a fruity drink**Other Uses: [10]** Unlike its cousin Lemons Limes only have one extra use and that's the juice makes a fine perfume (Craft Chemical: DC 15 Perfume)**10 Wood      150 Fruit      2000 Perfume**

**Lotus [10]****E, M**

**Description:** There are two species of lotus: one has yellow flowers and the other pink flowers. The flowers are large and showy. The leaves, which may float on or rise above the surface of the water, often reach 1.5 meters in radius. The fruit has a distinctive flattened shape and contains up to 20 hard seeds.

**Edible Parts: [15]** All parts of the plant are edible raw or cooked. The underwater parts contain large quantities of starch. Dig the fleshy portions from the mud and bake or boil them. Boil the young leaves and eat them as a vegetable. The seeds have a pleasant flavor and are nutritious. Eat them raw, or parch and grind them into flour.

**Craft Cooking - Flour (15), Craft Alchemy - Perfume (20)**

**50 Flower      100 Flour      5000 Perfume +250 Rare Colored Lotus**

**Lantana [15]****P**

**Description:** Lantana is a shrub-like plant that may grow up to 45 centimeters high. It has opposite, round leaves and flowers borne in flat-topped clusters. The flower color (which varies in different areas) may be white, yellow, orange, pink, or red. It has a dark blue or black berrylike fruit. A distinctive feature of all parts of this plant is its strong scent.

**CAUTION [20]**

All parts of this plant are poisonous if eaten and can be fatal. This plant causes dermatitis in some individuals.

**Craft Alchemy - Poison (20)** does 2d12 damage a round for 2d20 rounds Fort DC 20

**Raw Poison** - does 1d12 damage a round for 1d20 rounds Fort DC 15

**5 Plant      200 Poison**

**Laver [10]****E, D**

**Description:** A seaweed that has great values in the form of Iodine and Iron. Most commonly known as Japanese Nori. It's a great source of vitamins needed and lays easily in tidal pools and calm ocean watery areas.

**Edible Parts: [10]** The whole plant is edible once it has been boiled or baked.

**Other Uses: [10]** Boiling the plant can produce a medically used version of Iodine that can be used to clean wounds and treat infection. (Craft chemical, DC 20 Iodine salve heals 2d8)

**5 Seaweed      1500 Iodine Salve**

**Manchineel [20]****P, W**

**Description:** Manchineel is a tree reaching up to 15 meters high with alternate, shiny green leaves and spikes of small greenish flowers. Its fruits are green or greenish-yellow when ripe.

**CAUTION [25]**

This tree is extremely toxic. It causes severe dermatitis in most individuals after only .5 hour. Even water dripping from the leaves may cause dermatitis. The smoke from burning it irritates the eyes. No part of this plant should be considered a food.

**Craft Alchemy - Poison Liquid (20)** Fort Dc 20 and does 2d8 damage a minute for 1d20 minutes, **Poison Gas (30)** grants Blindness and does 3d8 damage a round for 1d12 rounds DC 20 Fort

**10 Wood      1000 Poison Liquid      2000 Poison Gas**

**Mango [10]****W, E**

**Description:** This tree may reach 30 meters in height. It has alternate, simple, shiny, dark green leaves. Its flowers are small and inconspicuous. Its fruits have a large single seed. There are many cultivated varieties of mango. Some have red flesh, others yellow or orange, often with many fibers and a kerosene taste.

**Edible Parts: [10]** The fruits are a nutritious food source. The unripe fruit can be peeled and its flesh eaten by shredding it and eating it like a salad. The ripe fruit can be peeled and eaten raw. Roasted seed kernels are edible.

**10 Wood      150 Fruit**

**Manioc [10]****E, M**

**Description:** Manioc is a perennial shrubby plant, 1 to 3 meters tall, with jointed stems and deep green, fingerlike leaves. It has large, fleshy rootstocks.

**Edible Parts: [20]** The rootstocks are full of starch and high in food value. Two kinds of manioc are known: bitter and sweet. Both are edible. The bitter type contains poisonous hydrocyanic acid. To prepare manioc, first grind the fresh manioc root into a pulp, then cook it for at least 1 hour to remove the bitter poison from the roots. Then flatten the pulp into cakes and bake as bread. Manioc cakes or flour will keep almost indefinitely if protected against insects and dampness. Wrap them in banana leaves for protection. **Craft Cooking [15]** Pulp Flour

**50 Root                      100 Flour**

**Marsh marigold [10]****E**

**Description:** This plant has rounded, dark green leaves arising from a short stem. It has bright yellow flowers.

**Edible Parts: [10]** All parts are edible if boiled.

**50 Flower              10 Plant**

**Morels [10]****E**

**Description:** A large solitary mushroom with sponge like head.

**Edible Parts: [10]** the whole plant is edible but must be cooked

**CAUTION: [15]** Eating the mushrooms raw can cause one to get sick doing 1d8 damage a round for 1d20 rounds. Cooking the mushroom destroys the poison DC 15 Poison

**Other Uses: [20]** Processing the poison from the mushrooms creates a powerful Rocket fuel source. **Craft Chemical [35]** - Rocket Fuel

**100 Mushroom              30,000 Rocket Fuel**

**Mulberry [10]****E,M,P,D**

**Description:** This tree has alternate, simple, often lobed leaves with rough surfaces. Its fruits are blue or black and many seeded.

**Edible Parts: [10]** The fruit is edible raw or cooked. It can be dried for eating later.

**Other Uses: [15]** You can shred the inner bark of the tree and use it to make twine or cord.

**CAUTION [20]**

When eaten in quantity, mulberry fruit acts as a laxative. Green, unripe fruit can be hallucinogenic and cause extreme nausea and cramps. DC 15 Will vs. Illusions

**Craft Item - Twine / cord (10), Craft Alchemy - Hallucinogenic Powder (20)** DC 15 Fort save vs. Illusions

**150 Fruit              100 Twine              2000 Powder**

**Mushtake [20]**

**Description:** A long stemmed Mushroom with a tall brown cap

**Edible Parts: [10]** This highly prized mushroom is a rare treat to many and can rarely be found through out the world. It has the taste of the highest quality truffles.

**50,000 Mushroom**

**Mustard [15]****E,M,S**

**Description:** A tall yellow flowering plant with many flowers on a stem

**Other Uses: [15]** On top of making Mustard spice, it also can be used to make Mustard Gas a deadly Chemical Gas

**Craft Alchemy - Mustard Gas (15)** does 3d12 damage for 1d6 rounds when in gas, Fort DC 25

**Craft Cooking - Mustard (20)** [failure creates used mustard gas]

**50 Plant              150 Mustard              2500 Mustard Gas (contained)**

**Nettle [10]****E, M**

**Description:** These plants grow several feet high. They have small, inconspicuous flowers. Fine, hairline bristles cover the stems, leafstalks, and undersides of leaves. The bristles cause a stinging sensation when they touch the skin.

**Edible Parts: [15]** Young shoots and leaves are edible. Boiling the plant for 10 to 15 minutes destroys the stinging element of the bristles. This plant is very nutritious.

**Other Uses: [10]** Mature stems have a fibrous layer that you can divide into individual fibers and use to weave string or twine.

**50 Shoots****100 Twine****Nipa palm [10]****E, M**

**Description:** This palm has a short, mainly underground trunk and very large, erect leaves up to 6 meters tall. The leaves are divided into leaflets. A flowering head forms on a short erect stem that rises among the palm leaves. The fruiting (seed) head is dark brown and may be 30 centimeters in diameter.

**Edible Parts: [10]** The young flower stalk and the seeds provide a good source of water and food. Cut the flower stalk and collect the juice. The juice is rich in sugar. The seeds are hard but edible.

**Other Uses: [10]** The leaves are excellent as thatch and coarse weaving material.

**100 Juice****50 Seeds****10 Leaves****Nutmeg [15]****E,S,D,W**

**Description:** A small tree with a egg like nut and small white flowers

**Other Uses: [15]** On top as a Spice Nutmeg can be made into a drug that causes dizziness, and nausea.

**Craft Alchemy - Dizziness Drug (20)** DC 15 Fort DC, causes Dazed effect for 1d8 rounds

**150 Nut****10 Wood****1500 Drug****Oak [10]****W, E, M**

**Description:** Oak trees have alternate leaves and acorn fruits. There are two main groups of oaks: red and white. The red oak group has leaves with bristles and smooth bark in the upper part of the tree. Red oak acorns take 2 years to mature. The white oak group has leaves without bristles and a rough bark in the upper portion of the tree. White oak acorns mature in 1 year.

**Edible Parts: [10]** All parts are edible, but often contain large quantities of bitter substances. White oak acorns usually have a better flavor than red oak acorns. Gather and shell the acorns. Soak red oak acorns in water for 1 to 2 days to remove the bitter substance. You can speed up this process by putting wood ashes in the water in which you soak the acorns. Boil the acorns or grind them into flour and use the flour for baking. You can use acorns that you baked until very dark as a coffee substitute.

**Other Uses: [20]** Oak wood is excellent for building or burning. Small oaks can be split and cut into long thin strips (3 to 6 millimeters thick and 1.2 centimeters wide) used to weave mats, baskets, or frameworks for packs, sleds, furniture, etc. Oak bark soaked in water produces a tanning solution used to preserve leather. **Craft Alchemy - Leather Preserve (20)**

**100 Acorn****10 Wood****500 Leather Preserve****Oats [10]****E,M**

**Description:** A simple long grass with individual seeds held together by a thin strand.

**Edible Parts: [10]** The seeds are edible raw but can be processed into flour, bread, even cooked in to a fine mush.

**Other Uses: [10]** The plant in all make a good animal feed

**50 Grain****100 Flour****50 Seed for planting****100 Feed for animals**

**Oleander [15]****W,P**

**Description:** This shrub or small tree grows to about 9 meters, with alternate, very straight, dark green leaves. Its flowers may be white, yellow, red, pink, or intermediate colors. Its fruit is a brown, pod like structure with many small seeds.

**CAUTION [20]**

All parts of the plant are very poisonous. Do not use the wood for cooking; it gives off poisonous fumes that can poison food.

**Craft Alchemy - Poison liquid (15)** does 2d6 a round in damage for 1d20 rounds, Fort Dc 20

**Poison Gas (20)** 2d4 damage a round for 2d20 rounds Fort DC 25

**Raw Poison** - Eating does 1d6 damage a round for 1d10 rounds, Burning wood 1d4 a round for 1d8 rounds DC Fort 15

**50 Leaves      10 Wood      1500 Liquid poison      2000 poison Gas**

**Olive [10]****W,E,D,M**

**Description:** A small bushy tree with small long almost grass like leaves and little green fruits.

**Edible Parts: [10]** While the Leaves and Oil form the tree are edible and can be used in cooking the fruits are the most edible parts. They are eaten raw or fermented to flavor.

**Other Uses: [10]** The leaves hold some healing properties when boiled into a tea (Craft Chemical, DC 10 Cure Light Potion) The trees fruit gives off a slightly oily substance which in fact is oil processed it can be used as a fuel source (Craft Chemical, Dc 15 Oil)

**100 Fruit      50 Pit for planting      1000 Oil      100 Cure Light Potion**

**Onion [10]****E, G, M, D**

**Description:** *Allium cernuum* is an example of the many species of onions

**Edible Parts: [10]**The bulbs and young leaves are edible raw or cooked. Use in soup or to flavor meat.

**Other Uses:[15]** Eating large quantities of onions will give your body an odor that will help to repel insects.

**Craft Alchemy - Insecticide**

**50 Onion      50 Seeds for planting      100 insecticide**

**Orach [10]****E**

**Description:** This plant is vine like in growth and has arrowhead-shaped, alternate leaves up to 5 centimeters long. Young leaves maybe silver-colored. Its flowers and fruits are small and inconspicuous.

**Edible Parts: [15]** The entire plant is edible raw or boiled.

**50 Plant**

**Orange[5]****E,W,D,M**

**Description:** An evergreen flowering tree generally growing to 9–10 m in height (although very old specimens have reached 15 m). The leaves are arranged alternately, are ovate in shape with crenulate margins and are 4–10 cm long. It bears a orange colored fruit, a type of berry.

**Edible Parts: [5]** The fruit is edible and can be use in a massive amount of ways from raw to seasoning, to making sweets and juice. (Craft Cooking DC 5 Juice, Craft Cooking DC 15 Marmalade)

**Other Uses:** The Flower can be used to make Perfume (Craft Chemical DC 15 Perfume) the Peel A fine Wax (Craft Chemical DC 15 Wax) The juice can be made into a Cleaning Solution (Craft Chemical DC 10 Cleaning Solution) and also a powerful Vitamin to fight off disease (Craft Chemical DC 15 Vitamin, grants +5 to fort vs. disease a day)

**10 Wood      150 Fruit      200 Juice      2000 Perfume      1000 Marmalade      200 Vitamin**  
**500 Cleaning Solution      1000 Wax      500 Flower**

**Oregano [10]** **S**  
**Description:** A small Clover like flowering plant  
**50 Plant**

**Palmetto palm [10]** **W, E, M**  
**Description:** The palmetto palm is a tall, un branched tree with persistent leaf bases on most of the trunk. The leaves are large, simple, and palmate lobed. Its fruits are dark blue or black with a hard seed.  
**Edible Parts: [15]** The fruits are edible raw. The hard seeds may be ground into flour. The heart of the palm is a nutritious food source at any time. Cut off the top of the tree to obtain the palm heart. (Craft Cooking 10 - Flour)  
**10 Wood 150 Fruit 5 Seeds 100 Flour**

**Pangi [15]** **W,P**  
**Description:** This tree, with heart-shaped leaves in spirals, reaches a height of 18 meters. Its flowers grow in spikes and are green in color. Its large, brownish, pear-shaped fruits grow in clusters.  
**CAUTION [15]** All parts are poisonous, especially the fruit. In the Raw Poison Does DC 15 Fort 2d8 a minute for 1d20 Minutes. Processed (Craft Chemical DC 15 Poison) it does DC 20 Fort 2d10 a minute for 3d12 Minutes.  
**10 Wood 10 Fruit 500 Processed Poison**

**Papaya or pawpaw [10]** **E,M**  
**Description:** The papaya is a small tree 1.8 to 6 meters tall, with a soft, hollow trunk. When cut, the entire plant exudes a milky juice. The trunk is rough and the leaves are crowded at the trunk's apex. The fruit grows directly from the trunk, among and below the leaves. The fruit is green before ripening. When ripe, it turns yellow or remains greenish with a squash like appearance.  
**Edible Parts: [10]** The ripe fruit is high in vitamin C. Eat it raw or cook it like squash. Place green fruit in the sun to make it ripen quickly. Cook the young papaya leaves, flowers, and stems carefully, changing the water as for taro.  
**CAUTION [15]** Be careful not to get the milky sap from the unripe fruit into your eyes. It will cause intense pain and temporary--sometimes even permanent--blindness. (Craft Chemical Blinding Spray DC 15 Fort)  
**Other Uses: [20]** Use the milky juice of the unripe fruit to tenderize tough meat. Rub the juice on the meat.  
**150 Fruit 500 Blinding Spray**

**Parsley [10]** **S**  
**Description:** a stalky leafy green plant  
**50 Plant**

**Pea [10]** **E,M**  
**Description:** A small Vine like plant that is all green with broad leaves and a pod like bean for fruit.  
**Edible Parts: [10]** While the shoots can be eaten the seeds inside are the main dish of this plant eaten dried, or cooked it's a handy plant for adding flavor to meals.  
**Other Uses: [30]** A skilled Craftsman can process the pods chemical makeup into a new and durable material similar to glass yet less likely to shatter. (Craft Chemical DC 45 Plastic)  
**100 Pod 50 Seed For planting 5,000,000 Plastic Unit**

**Peach [10]****E,W,M**

**Description:** A large tree The leaves are lanceolate, 7–16 cm (2.8–6.3 in) long, 2–3 cm (0.79–1.2 in) broad, pinnately veined. The flowers are produced in early spring before the leaves; they are solitary or paired, 2.5–3 cm diameter, pink, with five petals. The fruit has yellow or whitish flesh, a delicate aroma, and a skin that is either velvety or smooth

**Edible Parts:** [10] The fruit of the tree is edible and can be used to season other foods or make a fruit juice with it.

**Other Uses:** [15] The Flower of the tree can be used to make a fine perfume (Craft Chemical DC 15 Perfume)

**10 Wood      150 Fruit      2000 Perfume**

**Peanut [10]****E,M**

**Description:** A small green like plant low to the ground with yellow flowers a four broad leaves to a stem reaching into the ground.

**Edible Parts:** [10] The roots are a bean grown underground sought for its high protean. The seeds in the pod are the only truly edible parts that can be eaten raw, Salted or flavored, Boiled or even processed into other means (Craft Cooking DC 15 Peanut Butter, DC 10 Peanut Flour)

**Other Uses:** [15] The Nuts produce a small amount of oil that can be extracted and used as a fuel source (Craft Chemical DC 20 Oil)

**50 Seed for planting    100 Nuts      500 Peanut Butter      250 Flour      1000 Oil**

**Pear [10]****E,W,M**

**Description:** They are medium sized trees, reaching 10–17 m tall, often with a tall, narrow crown; a few species are shrubby. The leaves are alternately arranged, simple, 2–12 cm long, glossy green on some species, densely silvery-hairy in some others; leaf shape varies from broad oval to narrow lanceolate.

**Edible Parts:** [10]The Fruit is edible raw and can be used to season other foods or be made into a juice.

**Other Uses:** [15] The wood from this tree is highly sought in crafting musical instruments increasing its value.

**200 Wood      150 Fruit      50 Seeds for planting**

**Peppermint [15]****E, S**

**Description:** .A small Green jagged edged leafed plant

**Edible Parts:** [15] The whole plant is edible

**Craft Cooking - Mint Oil (10)**

**50 Plant      100 Mint Oil**

**Persimmon [10]****E, W, M, P**

**Description:** These trees have alternate, dark green, elliptic leaves with entire margins. The flowers are inconspicuous. The fruits are orange, have a sticky consistency, and have several seeds.

**Edible Parts:** [15] The leaves are a good source of vitamin C. The fruits are edible raw or baked. To make tea, dry the leaves and soak them in hot water. You can eat the roasted seeds.

**CAUTION [20]**

Be careful not to get the milky sap from the unripe fruit into your eyes. It will cause intense pain and temporary--sometimes even permanent--blindness.

**Craft Cooking - Tea**

**Craft Alchemy - Poison (15) causes Blindness DC 20 Fort save**

**50 Leaves      100 Tea      1500 Poison    10 Wood**

**Physic nut [15]****P**

**Description:** This shrub or small tree has large, 3- to 5-parted alternate leaves. It has small, greenish-yellow flowers and its yellow, apple-sized fruits contain three large seeds.

**CAUTION [15]** The seeds taste sweet but their oil is violently purgative. All parts of the physic nut are poisonous. In the Raw does 1d6 per hour for 1d12 hours, processed does 4d6 an hour for 1d20 hours

**50 Fruit****200 Processed Poison****Pincushion cactus [10]****E**

**Description:** Members of this cactus group are round, short, barrel-shaped, and without leaves. Sharp spines cover the entire plant.

**Edible Parts: [10]** They are a good source of water in the desert.

**10 Cactus Water****Pine [10]****E, W, M**

**Description:** Pine trees are easily recognized by their needlelike leaves grouped in bundles. Each bundle may contain one to five needles, the number varying among species. The tree's odor and sticky sap provide a simple way to distinguish pines from similar looking trees with needlelike leaves.

**Edible Parts: [20]** The seeds of all species are edible. You can collect the young male cones, which grow only in the spring, as a survival food. Boil or bake the young cones. The bark of young twigs is edible. Peel off the bark of thin twigs. You can chew the juicy inner bark; it is rich in sugar and vitamins. Eat the seeds raw or cooked. Green pine needle tea is high in vitamin C.

**Other Uses : [20]** Use the resin to waterproof articles. Also use it as glue. Collect the resin from the tree. If there is not enough resin on the tree, cut a notch in the bark so more sap will seep out. Put the resin in a container and heat it. The hot resin is your glue. Use it as is or add a small amount of ash dust to strengthen it. Use it immediately. You can use hardened pine resin as an emergency dental filling.

**Craft Alchemy - Resin (15)****10 Pine Needles****30 Cones****10 Wood****1500 Resin****Pineapple [10]****E,D**

**Description:** a herbaceous short-lived perennial plant which grows to 1.0 to 1.5 meters (3.3 to 4.9 ft) tall. After the first fruit is produced, side shoots (called 'suckers' by commercial growers) are produced in the leaf axils of the main stem. These may be removed for propagation, or left to produce additional fruits on the original plant.

**Edible Parts: [10]** The woody stalk part of the plant is edible once cut into the sweet inside is revealed. It can be eaten raw used as seasoning in cooking, cooked or even made in a juice drink.

**Other Uses: [20]** The root and fruit can be ground into a simple healing potion (Craft Alchemy DC 15 Cure Light Potion)

**200 Fruit****100 Cure Light Potion**

**Plantain, broad and narrow leaf [10] E, D**

**Description:** The broad leaf plantain has leaves over 2.5 centimeters across that grow close to the ground. The flowers are on a spike that rises from the middle of the cluster of leaves. The narrow leaf plantain has leaves up to 12 centimeters long and 2.5 centimeters wide, covered with hairs. The leaves form a rosette. The flowers are small and inconspicuous.

**Edible Parts: [15]** The young tender leaves are edible raw. Older leaves should be cooked. Seeds are edible raw or roasted.

**Other Uses: [20]**To relieve pain from wounds and sores, wash and soak the entire plant for a short time and apply it to the injured area. To treat diarrhea, drink tea made from 28 grams (1 ounce) of the plant leaves boiled in 0.5 liter of water. The seeds and seed husks act as laxatives.

**Craft Alchemy - Potion (15 Remove Disease, 20 Cure Light)** Remove Disease cures disease of 15 DC, Cure Light Potion Heals 1d8 damage.

**10 Leaves 500 Remove Disease 200 Cure Light**

**Pokeweed [15] E,D,M,P**

**Description:** This plant may grow as high as 3 meters. Its leaves are elliptic and up to 1 meter in length. It produces many large clusters of purple fruits in late spring.

**Edible Parts: [20]** The young leaves and stems are edible cooked. Boil them twice, discarding the water from the first boiling. The fruits are edible if cooked.

**Other Uses: [25/30/30]** Use the juice of fresh berries as a dye. Topical: acne Internal: tonsillitis

**CAUTION**  
All parts of this plant are poisonous if eaten raw. Never eat the underground portions of the plant as these contain the highest concentrations of the poisons. Do not eat any plant over 25 centimeters tall or when red is showing in the plant.

Seeds and the rind need to be cooked while the shell can be eaten raw or cooked. The pumpkin is high in vitamins and can even be made into a juice.**Other Uses:** [10] While decorating fresh pumpkin shells into lanterns are a cheap way to make a hooded lantern or jack o lantern (Craft Item DC 5, Lantern) the whole un used pumpkin is also looked at in times as a alternate source of ammo for catapults. The plants vine is also useful as a rope. (Craft Item DC 10, Rope)**200 Fruit      50 Lantern      100 Rope      50 Seeds****Purslane [15]****E, M****Description:** This plant grows close to the ground. It is seldom more than a few centimeters tall. Its stems and leaves are fleshy and often tinged with red. It has paddle shaped leaves, 2.5 centimeter or less long, clustered at the tips of the stems. Its flowers are yellow or pink. Its seeds are tiny and black.**Edible Parts:** [15] All parts are edible. Wash and boil the plants for a tasty vegetable or eat them raw. [20] Use the seeds as a flour substitute or eat them raw.**Craft Cooking - Flour (10)****50 Plant      100 Flour****Radish [10]****E****Description:** A small Stalk plant with a small red bulb or large white stalk at the root.**Edible Parts:** [10] The whole plant is edible yet the root has the most nutrition, it can be eaten raw or cooked.**100 Plant**

**Rattan palm [10]****W, E, M**

**Description:** The rattan palm is a stout, robust climber. It has hooks on the midrib of its leaves that it uses to remain attached to trees on which it grows. Sometimes, mature stems grow to 90 meters. It has alternate, compound leaves and a whitish flower.

**Edible Parts: [15]** Rattan palms hold a considerable amount of starch in their young stem tips. You can eat them roasted or raw. In other kinds, a gelatinous pulp, either sweet or sour, surrounds the seeds. You can suck out this pulp. The palm heart is also edible raw or cooked.

**Other Uses: [10]** You can obtain large amounts of potable water by cutting the ends of the long stems. The stems can be used to make baskets and fish traps.

**10 Wood      10 Stems for Weaving      50 Pulp**

**Red Pepper [5]****E**

**Description:** A small Vine-like plant with Large red fruit in the form of a bell

**Edible Parts: [5]** The fruit is edible and often when its green its considered to be best eaten raw but can be cooked as well

**100 Bell Pepper      50 Seeds for planting**

**Reed [10]****E, M**

**Description:** This tall, coarse grass grows to 3.5 meters tall and has gray-green leaves about 4 centimeters wide. It has large masses of brown flower branches in early summer. These rarely produce grain and become fluffy, gray masses late in the season.

**Edible Parts: [15]** All parts of the plant are edible raw or cooked in any season. Harvest the stems as they emerge from the soil and boil them. You can also harvest them just before they produce flowers, then dry and beat them into flour. You can also dig up and boil the underground stems, but they are often tough. Seeds are edible raw or boiled, but they are rarely found.

**Craft Cooking - Flour (10)**

**10 Reed      100 Flour**

**Reindeer moss [15]****E**

**Description:** Reindeer moss is a low-growing plant only a few centimeters tall. It does not flower but does produce bright red reproductive structures.

**Edible Parts: [15]** The entire plant is edible but has a crunchy, brittle texture. Soak the plant in water with some wood ashes to remove the bitterness, then dry, crush, and add it to milk or to other food.

**10 Moss**

**Renghas tree, Marking nut [10]****P, D**

**Description:** A small tree that produces a small nut similar to a cashew in nature. Within its broad oar like leaves.

**Caution: [20]** The nut is toxic in nature unprocessed does 2d6 an hour for 1d12 hours Fort DC 15

**Other Uses: [25]** The nut can be boiled then roasted and ground into a fine powder that has great healing properties. Also the nut in its raw can be used as form of marking device with its black mark it leaves behind. **Craft Chemical [20]** - Healing Powder 3d8

**50 Marker Nut      5000 Healing Powder**

**Reishi [15]****D**

**Description:** A large and flat shelf like mushroom with a chocolate brown color

**Other Uses: [15]** A strongly and widely sought mushroom for medical purposes. It can be used to make a strong Healing potion. **Craft Chemical [30]** Cure Serious Wounds 4d8

**100 Mushroom      50,000 Cure Serious Wounds Potion**

**Rice [15]****E**

**Description:** Rice is a tall grass that averages 1 to 1.5 meters in height, but may reach 4.5 meters. Its grain grows in very loose heads at the top of the plant and is dark brown or blackish when ripe.

**Edible Parts:** [15] During the spring and summer, the central portion of the lower stems and root shoots are edible. Remove the tough covering before eating. During the late summer and fall, collect the straw-covered husks. Dry and parch the husks, break them, and remove the rice. Boil or roast the rice and then beat it into flour. **Craft Cooking [10]** - Flour

**100 Rice      200 Rice Flour**

**Rock tripe [15]****E**

**Description:** This plant forms large patches with curling edges. The top of the plant is usually black. The underside is lighter in color.

**Edible Parts:** [15] The entire plant is edible. Scrape it off the rock and wash it to remove grit. The plant may be dry and crunchy; soak it in water until it becomes soft. Rock tripes may contain large quantities of bitter substances; soaking or boiling them in several changes of water will remove the bitterness.

**50 Plant**

**Rose apple [10]****E**

**Description:** This tree grows 3 to 9 meters high. It has opposite, simple, dark green, shiny leaves. When fresh, it has fluffy, yellowish-green flowers and red to purple egg-shaped fruit.

**Edible Parts:** [10] The entire fruit is edible raw or cooked.

**100 Fruit**

**Rosary pea or crab's eyes [15]****P**

**Description:** This plant is a vine with alternate compound leaves, light purple flowers, and beautiful seeds that are red and black.

**CAUTION:** [20] This plant is one of the most dangerous plants. One seed may contain enough poison to kill an adult. In the Raw DC 40 vs. 4d6 a minute for 1d6 hours (Craft chemical 30 Processed Poison DC 50 vs. 8d6 a minute for 1d12 hours)

**30,000 Plant    100,000 Processed Poison**

**Rosemary [15]****S,M**

**Other Uses:** [15] Believed to hold some healing properties

**Craft Alchemy - Cure Light wounds (20)** Heals 1d8 HP

**50 Spice      50 Flower      200 Cure Light**

**Sago palm [10]****W, E, M**

**Description:** These palms are low trees, rarely over 9 meters tall, with a stout, spiny trunk. The outer rind is about 5 centimeters thick and hard as bamboo. The rind encloses a spongy inner pith containing a high proportion of starch. It has typical palm like leaves clustered at the tip.

**Edible Parts: [15]** These palms, when available, are of great use to the survivor. One trunk, cut just before it flowers, will yield enough sago to feed a person for 1 year. Obtain sago starch from Non flowering palms. To extract the edible sage, cut away the bark lengthwise from one half of the trunk, and pound the soft, whitish inner part (pith) as fine as possible. Knead the pith in water and strain it through a coarse cloth into a container. The fine, white sago will settle in the container. Once the sago settles, it is ready for use. Squeeze off the excess water and let it dry. Cook it as pancakes or oatmeal. Two kilograms of sago is the nutritional equivalent of 1.5 kilograms of rice. The upper part of the trunk's core does not yield sage, but you can roast it in lumps over a fire. You can also eat the young sago nuts and the growing shoots or palm cabbage.

**Other Uses: [10]** Use the stems of tall sorghums as thatching materials.

**100 Pith          50 Nuts          10 Wood**

**Sassafras [15]****E, M,W**

**Description:** This shrub or small tree bears different leaves on the same plant. Some leaves will have one lobe, some two lobes, and some no lobes. The flowers, which appear in early spring, are small and yellow. The fruits are dark blue. The plant parts have a characteristics root beer smell.

**Edible Parts: [15]** The young twigs and leaves are edible fresh or dried. You can add dried young twigs and leaves to soups. Dig the underground portion, peel off the bark, and let it dry. Then boil it in water to prepare sassafras tea.

**Other Uses: [20]** Shred the tender twigs for use as a toothbrush.

**Craft Cooking - Tea, Cola (10,15)**

**Craft Items - Tooth brush (5)**

**10 Wood          100 Tea          1000 Cola          50 Toothbrush**

**Sexual [15]****W, E**

**Description:** The saxaul is found either as a small tree or as a large shrub with heavy, coarse wood and spongy, water-soaked bark. The branches of the young trees are vivid green and pendulous. The flowers are small and yellow.

**Edible Parts: [20]** The thick bark acts as a water storage organ. You can get drinking water by pressing quantities of the bark. This plant is an important source of water in the arid regions in which it grows.

**10 Water          10 Wood**

**Screw pine [10]****W, E**

**Description:** The screw pine is a strange plant on stilts, or prop roots, that support the plant above-ground so that it appears more or less suspended in midair. These plants are either shrubby or treelike, 3 to 9 meters tall, with stiff leaves having saw like edges. The fruits are large, roughened balls resembling pineapples, but without the tuft of leaves at the end.

**Edible Parts: [10]** Knock the ripe fruit to the ground to separate the fruit segments from the hard outer covering. Chew the inner fleshy part. Cook fruit that is not fully ripe in an earth oven. Before cooking, wrap the whole fruit in banana leaves, breadfruit leaves, or any other suitable thick, leathery leaves. After cooking for about 2 hours, you can chew fruit segments like ripe fruit. Green fruit is inedible.

**10 Wood          100 Fruit**

**Sea orach [15]****E**

**Description:** The sea orach is a sparingly branched herbaceous plant with small, gray-colored leaves up to 2.5 centimeters long. Sea orach resembles lamb's quarter, a common weed in most gardens in the United States. It produces its flowers in narrow, densely compacted spikes at the tips of its branches.

**Edible Parts:** [15] Its leaves are edible. In the areas where it grows, it has the healthy reputation of being one of the few native plants that can sustain man in times of want.

**50 Plant****Sesame seed [10]****E**

**Description:** a pea pod like plant with fat white flowers

**Edible Parts:** [10] pea pods and the flowers are edible

**50 Pea pod****Sheep sorrel [10]****E, M**

**Description:** These plants are seldom more than 30 centimeters tall. They have alternate leaves, often with arrow like bases, very small flowers, and frequently reddish stems.

**Edible Parts:** [10] The plants are edible raw or cooked.

**CAUTION [20]**

These plants contain oxalic acid that can be damaging if too many plants are eaten raw.

Cooking seems to destroy the chemical.

**Craft Alchemy - Acid (20)** Acid does 1d6 damage a round for 1d6 rounds

**10 Plant 1000 Acid****Shiitake mushrooms [10]****E**

**Description:** A large white and brown umbrella like mushroom.

**Edible Parts:** [10] One of the Highest in Nutrition mushrooms and a great meat replacement.

**500 Mushroom****Sorghum [15]****M,E**

**Description:** There are many different kinds of sorghum, all of which bear grains in heads at the top of the plants. The grains are brown, white, red, or black. Sorghum is the main food crop in many parts of the world.

**CAUTION [20]**

These plants contain oxalic acid that can be damaging if too many plants are eaten raw.

Cooking seems to destroy the chemical.

**Edible Parts:** The grains are edible at any stage of development. When young, the grains are milky and edible raw. Boil the older grains. Sorghum is a nutritious food.

**Other Uses:** Use the stems of tall sorghum as building materials.

**Craft Items - Net (15), Weave (15), Craft Alchemy - Acid (10)** does 1d4 around for 1d6 rounds

**50 Grain 50 Steams 1000 Acid****Soy [10]****E, M**

**Description:** A large bean stalk with small v shaped bean pods.

**Edible Parts:** [10] The beans are edible eaten raw or cooked. The beans liquid can be used as a milk substitute (Craft Cooking DC10 Soy Milk), it also can form a gelatinous curd (Craft Cooking DC 10 Tofu) or be crafted into a fine powder for a flour replacement. (Craft Cooking DC 15 Flour)

**Other Uses:** [15] On top of being used as a food source for people it also can be used as animal feed and processed it creates a oil for fuel use (Craft Chemicals DC 20 Oil).

**100 Beans 300 Soy Milk 500 Tofu 250 Flour 100 Feed for animals****2000 Oil**

**Spatterdock or yellow water lily [15] E**

**Description:** This plant has leaves up to 60 centimeters long with a triangular notch at the base. The shape of the leaves is somewhat variable. The plant's yellow flowers are 2.5 centimeter across and develop into bottle-shaped fruits. The fruits are green when ripe.

**Edible Parts: [15]** All parts of the plant are edible. The fruits contain several dark brown seeds you can parch or roast and then grind into flour. The large rootstock contains starch. Dig it out of the mud, peel off the outside, and boil the flesh. Sometimes the rootstock contains large quantities of a very bitter compound. Boiling in several changes of water may remove the bitterness. **Craft Cooking - Flour (10)**

**100 Fruit 50 Flour**

**Spearmint [15] E,S,D**

**Description:** A small Jagged edge leafed plant smells of mint

**Other Use: [20]** A natural anti Testosterone plant that can be used to calm down individuals

**Craft Alchemy - Depressant (20)** removes effects of Berserk, Rage and Fear

**50 Leaves 1500 Depressant**

**Spinach [10] E**

**Description:** An edible flowering plant . It is an annual plant, which grows to a height of up to 30 cm.

**Edible Parts: [10]** The whole plant is edible raw or cooked. And is a high source of vitamins

**150 Plant**

**Squash [10] E**

**Description:** A Ground Vine with yellow flowers and produce Long green, yellow, or orange fruit.

**Edible Parts: [10]** The plants fruit is edible raw or cooked and is a high source of vitamins.

**150 Fruit**

**St. John's wort [15] D,E**

**Description:** *a tall multi yellow lily like plant*

**Other Uses: [15]** St. John's wort Antidepressant

**Craft Alchemy - Antidepressant (20)** removes effects of Depression and Fatigue

**50 Plant 1500 Antidepressant**

**Sterculia [20] W,E,M**

**Description:** Sterculias are tall trees, rising in some instances to 30 meters. Their leaves are either undivided or palmately lobed. Their flowers are red or purple. The fruit of all sterculias is similar in aspect, with a red, segmented seedpod containing many edible black seeds.

**Edible Parts: [10]** The large, red pods produce a number of edible seeds. The seeds of all sterculias are edible and have a pleasant taste similar to cocoa. You can eat them like nuts, either raw or roasted.

**50 Fruit 50 Seeds 10 Wood**

**Strawberry [10] E, G**

**Description:** Strawberry is a small plant with a three-leaved growth pattern. It has small, white flowers usually produced during the spring. Its fruit is red and fleshy.

**Edible Parts: [15]** The fruit is edible fresh, cooked, or dried. Strawberries are a good source of vitamin C. You can also eat the plant's leaves or dry them and make a tea with them.

**50 Fruit 50 Seeds for Garden**

**Strychnine tree [15]****P, W**

**Description:** The strychnine tree is a medium-sized evergreen, reaching a height of about 12 meters, with a thick, frequently crooked trunk. Its deeply veined oval leaves grow in alternate pairs. Small, loose clusters of greenish flowers appear at the ends of branches and are followed by fleshy, orange-red berries about 4 centimeters in diameter.

**CAUTION [15]** The berries contain the dislike seeds that yield the poisonous substance strychnine. All parts of the plant are poisonous. In the Raw DC 20 Fort 2d6 a hour for 1d12 hours, Craft Chemical DC 20 - Processed Poison DC 30 Fort vs. 4d6 a hour for 2d12 hours.

**10 Wood      50 Berries      500 Processed Poison**

**Sugarcane [10]****E**

**Description:** This plant grows up to 4.5 meters tall. It is a grass and has grass like leaves. Its green or reddish stems are swollen where the leaves grow. Cultivated sugarcane seldom flowers.

**Edible Parts: [10]** The stem is an excellent source of sugar and is very nutritious. Peel the outer portion off with your teeth and eat the sugarcane raw. You can also squeeze juice out of the sugarcane.

**10 Cane      100 Sugar**

**Sugar palm [10]****E, M**

**Description:** This tree grows about 15 meters high and has huge leaves up to 6 meters long. Needlelike structures stick out of the bases of the leaves. Flowers grow below the leaves and form large conspicuous dusters from which the fruits grow.

**Edible Parts: [15]** The chief use of this palm is for sugar. However, its seeds and the tip of its stems are a survival food. Bruise a young flower stalk with a stone or similar object and collect the juice as it comes out. It is an excellent source of sugar. Boil the seeds. Use the tip of the stems as a vegetable.

**Other Uses: [15]** The shaggy material at the base of the leaves makes an excellent rope as it is strong and resists decay.

**50 Stems      50 Seeds      100 Sugar      100 Rope**

**Sugar wrack [5]****E, D**

**Description:** A large seaweed found in vast areas of ocean.

**Edible Parts: [10]** The whole plant is edible once boiled

**Other Uses: [15]** Once the plant is burned to ash the ash is the chemical Sodium Carbonate Which has many medical uses (DC 20 Craft Chemical - Sodium Carbonate Pill Heals Sickness DC 15)

**5 Basic      500 Sodium Carbonate Pill**

**Poison sumac [15]****P**

**Description:** Poison sumac is a shrub that grows to 8.5 meters tall. It has alternate, pinnately compound leafstalks with 7 to 13 leaflets. Flowers are greenish-yellow and inconspicuous and are followed by white or pale yellow berries.

**CAUTION** All parts, at all times of the year, can cause serious contact dermatitis.

**Craft Alchemy - Poison (20)** Itching Powder 1d12 damage for 1d12 hours DC 20 Fort

**Poison Raw** - Causes rash that does 1d4 damage a day for 1d6 days DC 20 Fort

**10 Plant      1000 Itching Powder**

**Sweet sagewort [15]****D,E**

**Description:** Fern like plant with yellow flowers

**Other Uses: [20]** Help to prevent the development of parasite resistance, it also has anti-malarial properties, and has anti-cancer properties

**Craft Alchemy - Cure Moderate Potion (25)** Heals 3d8

**50 Plant      5000 Cure Moderate Potion**

**Sweetsop [15]****W,E,M**

**Description:** This tree is small, seldom more than 6 meters tall, and multi-branched. It has alternate, simple, elongate, dark green leaves. Its fruit is green when ripe, round in shape, and covered with protruding bumps on its surface. The fruit's flesh is white and creamy.

**Edible Parts:** [15] The fruit flesh is edible raw.

**Other Uses:** [20] You can use the finely ground seeds as an insecticide.

**CAUTION [20]**

The ground seeds are extremely dangerous to the eyes.

**Craft Alchemy - Insecticide (20), Blinding Powder (25)** DC 20 Fort vs. Blind

**150 Fruit      10 Wood      2000 Insecticide      1000 Blinding Powder**

**Sugar palm [10]****E, M**

**Description:** This tree grows about 15 meters high and has huge leaves up to 6 meters long. Needlelike structures stick out of the bases of the leaves. Flowers grow below the leaves and form large conspicuous dusters from which the fruits grow.

**Edible Parts:** [15] The chief use of this palm is for sugar. However, its seeds and the tip of its stems are a survival food. Bruise a young flower stalk with a stone or similar object and collect the juice as it comes out. It is an excellent source of sugar. Boil the seeds. Use the tip of the stems as a vegetable.

**Other Uses:** [15] The shaggy material at the base of the leaves makes an excellent rope as it is strong and resists decay.

**5 Stems      50 Seeds      100 Sugar      100 Rope**

**Sunflower [5]****E**

**Description:** A Large 3ft tall flower with bright yellow petals and a massive orange interior full of seeds.

**Edible Parts:** [10] The Seeds and flower petals are Edible. The seeds can be crushed and release a fine oil that can be used as a cooking aid (not strong enough as a fuel source)

**100 Seeds      200 Oil for cooking**

**Tamarind [15]****W,E**

**Description:** The tamarind is a large, densely branched tree, up to 25 meters tall. Its has pinnate leaves (divided like a feather) with 10 to 15 pairs of leaflets.

**Edible Parts:** [20] The pulp surrounding the seeds is rich in vitamin C and is an important survival food. You can make a pleasantly acid drink by mixing the pulp with water and sugar or honey and letting the mixture mature for several days. Suck the pulp to relieve thirst. Cook the young, unripe fruits or seedpods with meat. Use the young leaves in soup. You must cook the seeds. Roast them above a fire or in ashes. Another way is to remove the seed coat and soak the seeds in salted water and grated coconut for 24 hours, then cook them. You can peel the tamarind bark and chew it.

**100 Seeds      10 Wood**

**Tangerine [10]****W, E**

**Description:** A Bushy tree with long slender leaves and Small orange fruit.

**Edible Parts:** [10] The fruit is highly filled with vitamins mostly Vitamin C and is edible raw or cooked into food.

**150 Fruit      10 Wood**

**Tobacco [10]****M**

**Description:** Large fuzzy ground leaves. With small yellowish green flowers blooming from the stalk.

**Other Uses:** [10] Tobacco can be cured into a dry leaf that can be used in smoking or chewing. Its high quality use is why it is (Craft Item 15 Cigar/ 10 Cigarette)

**250 Tobacco Leaf      300 Tobacco Chew / Snuff      500 Cigarette      1000 Cigar**

**Tomato [10]****E**

**Description:** A Small bushy or vine like plant, with small yellow flowers and produce red to orange-red fruit.

**Edible Parts: [10]** The fruit is not only edible but is highly sought in many cooking recipes. It can also be eaten raw.

**150 Fruit****Taro [15]****E,P**

**Description:** All plants in these groups have large leaves, sometimes up to 1.8 meters tall, that grow from a very short stem. The rootstock is thick and fleshy and filled with starch.

**Edible Parts: [10]** All parts of the plant are edible when boiled or roasted. When boiling, change the water once to get rid of any poison.

**CAUTION [20]**

If eaten raw, these plants will cause a serious inflammation of the mouth and throat.

**Raw Poison** - does 1d4 a hour for 1d6 hours poison is not effective enough to be enhanced through chemical means DC 10 Fort Save

**150 Tuber****Tarragon [15]****S**

**Description:** a tall slender plant with broad leaves and small greenish yellow flowers

**50 Flower****Thistle [15]****E,M,P**

**Description:** This plant may grow as high as 1.5 meters. Its leaves are long-pointed, deeply lobed, and prickly.

**Edible Parts: [20]** Peel the stalks, cut them into short sections, and boil them before eating. The roots are edible raw or cooked.

**Other Uses:** Twist the tough fibers of the stems to make a strong twine.

**CAUTION [20]**

Some thistle species are poisonous. 50% chance of plant being poisonous

**Craft Items - Twine (15), Craft Alchemy - Poison (20)** does 2d6 damage a round for 1d12 rounds DC 10 Fort

**Poison in the Raw** - does 1d6 damage a round for 1d6 rounds DC 10 Fort

**10 Stalks      1000 Poison      50 Twine****Thyme [15]****S,D**

**Description:** A clover like plant that sprouts multiple stems

**Other Uses: [20]** Other than a spice it can be used to make a healing salve.

**Craft Alchemy - Healing Salve (20)** heals 1d4 for 1d20 rounds

**50 Clover      1500 Salve****Ti [10]****E, M**

**Description:** The ti has un branched stems with strap like leaves often clustered at the tip of the stem. The leaves vary in color and may be green or reddish. The flowers grow at the plant's top in large, plume like clusters. The ti may grow up to 4.5 meters tall.

**Edible Parts: [10]** The roots and very tender young leaves are good survival food. Boil or bake the short, stout roots found at the base of the plant. They are a valuable source of starch. Boil the very young leaves to eat. You can use the leaves to wrap other food to cook over coals or to steam.

**Other Uses: [10]** Use the leaves to cover shelters or to make a rain cloak. Cut the leaves into liners for shoes; this works especially well if you have a blister. Fashion temporary sandals from the ti leaves. The terminal leaf, if not completely unfurled, can be used as a sterile bandage. Cut the leaves into strips, then braid the strips into rope.

**10 Leaves      100 Rope      100 Bandage**

**Tree fern [10]****E**

**Description:** Tree ferns are tall trees with long, slender trunks that often have a very rough, bark like covering. Large, lacy leaves uncoil from the top of the trunk.

**Edible Parts: [15]** The young leaves and the soft inner portion of the trunk are edible. Boil the young leaves and eat as greens. Eat the inner portion of the trunk raw or bake it.

**5 Leaves      50 Fern**

**Tropical almond [10]****E, W**

**Description:** This tree grows up to 9 meters tall. Its leaves are evergreen, leathery, 45 centimeters long, 15 centimeters wide, and very shiny. It has small, yellowish-green flowers. Its fruit is flat, 10 centimeters long, and not quite as wide. The fruit is green when ripe.

**Edible Parts: [10]** The seed is a good source of food. Remove the fleshy, green covering and eat the seed raw or cooked.

**150 Nuts      10 Wood**

**Truffle [10]****E**

**Description:** A small black to brown patch of fungus collected within the dirt. Requires a Search result of +20 to find

**Edible Parts: [10]** A highly sought mushroom used in cooking or crafting fine deserts

**Other Uses: [20]** Processing the Truffle creates a fine cooking oil (Craft Cooking 20 cooking oil) or it can be used to make a fine and rare alcohol (Craft Cooking 30 Truffle Vodka)

**500 Truffle      500 Cooking Oil      5000 Truffle Vodka**

**Trumpet vine or trumpet creeper [10]****P, M**

**Description:** This woody vine may climb to 15 meters high. It has pea like fruit capsules. The leaves are pinnately compound, 7 to 11 toothed leaves per leaf stock. The trumpet-shaped flowers are orange to scarlet in color.

**CAUTION [20]**

This plant causes contact dermatitis.

**Craft Items - Rope (10), Craft Alchemy - Poison (20)** does 1d6 a round for 1d12 rounds DC 10 Fort

**Wasabi [15]****E,S,D**

**Description:** small stem like plants with beads.

**Other Uses: [20]** Other than as a spice the plant can be used to make smelling salts to wake drowsy individuals.

**Craft Alchemy - Wake Up Juice (15)** grants a +10 to wake up sleeping targets  
**150 Bead      1000 Wake Up Juice**

**Water chestnut [15]****E**

**Description:** The water chestnut is an aquatic plant that roots in the mud and has finely divided leaves that grow underwater. Its floating leaves are much larger and coarsely toothed. The fruits, borne underwater, have four sharp spines on them.

**Edible Parts: [15]** The fruits are edible raw and cooked. The seeds are also a source of food.  
**150 Chestnut**

**Water hemlock or spotted cowbane [15]****E, P**

**Description:** This perennial herb may grow to 1.8 meters high. The stem is hollow and sectioned off like bamboo. It may or may not be purple or red striped or mottled. Its flowers are small, white, and grow in groups that tend to form flat umbels. Its roots may have hollow air chambers and, when cut, may produce drops of yellow oil.

**CAUTION [15]**

This plant is very poisonous and even a very small amount of this plant may cause death. roots have been mistaken for parsnips. Poison in Raw does 1d8 a round for 1d12 minutes. DC 20 Fort save

**Craft Alchemy - Poison (20)** 2d8 a round for 2d12 minutes. DC 20 Fort Save  
**10 Plant      1000 Poison**

**Water lettuce [10]****E**

**Description:** The leaves of water lettuce are much like lettuce and are very tender and succulent. One of the easiest ways of distinguishing water lettuce is by the little plantlets that grow from the margins of the leaves. These little plantlets grow in the shape of a rosette. Water lettuce plants often cover large areas in the regions where they are found.

**Edible Parts:[10]** Eat the fresh leaves like lettuce. Be careful not to dip the leaves in the contaminated water in which they are growing. Eat only the leaves that are well out of the water.

**50 Lettuce**

**Water lily [10]****E,D**

**Description:** These plants have large, triangular leaves that float on the water's surface, large, fragrant flowers that are usually white, or red, and thick, fleshy rhizomes that grow in the mud.

**Edible Parts:** [15] The flowers, seeds, and rhizomes are edible raw or cooked. To prepare rhizomes for eating, peel off the corky rind. Eat raw, or slice thinly, allow to dry, and then grind into flour. Dry, parch, and grind the seeds into flour.

**Other Uses:** [20] Use the liquid resulting from boiling the thickened root in water as a medicine for diarrhea and as a gargle for sore throats.

**Craft Alchemy - Remove Disease (20)** Removes disease of Dc 10 or less

**50 Flower      500 Remove Disease**

**Watermelon [5]****E, M**

**Description:** A large ground Vine with Large Oak like leaves and yellow flowers, It produces a massive green fruit with darker green strips.

**Edible Parts:** [5] The fruit is edible. Minus the seeds and out shell.

**Other Uses:** [10] Carving the fruit fresh can craft the fruit into a lamp or carrying device (Craft Item DC 5 Lantern) for as long as it stays fresh. It also can be used in full as replacement ammo for catapults. And lastly the vines of the plant can be made into a rope (Craft Item DC 10 Rope)

**250 Fruit      100 Rope      200 Lantern**

**Water plantain [10]****E**

**Description:** This plant has small, white flowers and heart-shaped leaves with pointed tips. The leaves are clustered at the base of the plant.

**Edible Parts:** [15] The rootstocks are a good source of starch. Boil or soak them in water to remove the bitter taste.

**150 Root**

**Wheat [10]****E**

**Description:** A long to the point where the plant bends over with its tip covered in seeds in a row.

**Edible Parts:** [10] The seeds are edible and can be crushed to make into flour or cooked or eaten raw. The whole plant can be dried and turned into straw which can be used as both a material to cushion items or feed animals.

**200 Flour      100 Grain      50 Hay      500 Bread**

**Wild caper [10]****E**

**Description:** This is a thorny shrub that loses its leaves during the dry season. Its stems are gray green and its flowers pink.

**Edible Parts:** [10] The fruit and the buds of young shoots are edible raw.

**100 Fruit**

**Wild crab apple or wild apple [15]****E,P,W,G**

**Description:** Most wild apples look enough like domestic apples that the survivor can easily recognize them. Wild apple varieties are much smaller than cultivated kinds; the largest kinds usually do not exceed 5 to 7.5 centimeters in diameter, and most often less. They have small, alternate, simple leaves and often have thorns. Their flowers are white or pink and their fruits reddish or yellowish.

**Edible Parts:** [10] Prepare wild apples for eating in the same manner as cultivated kinds. Eat them fresh, when ripe, or cooked. Should you need to store food, cut the apples into thin slices and dry them. They are a good source of vitamins.

**CAUTION [15]**

Apple seeds contain cyanide compounds. Do not eat.

**Craft Alchemy - Poison (30)** 2d6 a round for 2d12 minutes DC 20 Fort Save

**Poison in Raw** - 1d6 a round for 1d12 rounds DC 15 Fort Save

**100 Fruit      5 Wood      250 Poison      50 Seeds for Gardening**

**Wild desert gourd or colocynth [10] E**

**Description:** The wild desert gourd, a member of the watermelon family, produces an 2.4- to 3-meter-long ground-trailing vine. The perfectly round gourds are as large as an orange. They are yellow when ripe.

**Edible Parts:** The seeds inside the ripe gourd are edible after they are completely separated from the very bitter pulp. Roast or boil the seeds--their kernels are rich in oil. The flowers are edible. The succulent stem tips can be chewed to obtain water. **Craft Cooking [10] Oil**

**100 Flowers 150 Oil**

**Wild dock and wild sorrel [15] E**

**Description:** Wild dock is a stout plant with most of its leaves at the base of its stem that is commonly 15 to 30 centimeters brig. The plants usually develop from a strong, fleshy, carrot-like taproot. Its flowers are usually very small, growing in green to purplish plume-like clusters. Wild sorrel similar to the wild dock but smaller. Many of the basal leaves are arrow-shaped but smaller than those of the dock and contain a sour juice.

**Edible Parts: [15]** Because of tender nature of the foliage, the sorrel and the dock are useful plants, especially in desert areas. You can eat their succulent leaves fresh or slightly cooked. To take away the strong taste, change the water once or twice during cooking. This latter tip is a useful hint in preparing many kinds of wild greens.

**50 Greens**

**Wild fig [10] E**

**Description:** These trees have alternate, simple leaves with entire margins. Often, the leaves are dark green and shiny. All figs have a milky, sticky juice. The fruits vary in size depending on the species, but are usually yellow-brown when ripe.

**Edible Parts: [10]** The fruits are edible raw or cooked. Some figs have little flavor.

**100 Fruit**

**Wild gourd or luffa sponge [15] E, G**

**Description:** The luffa sponge is widely distributed and fairly typical of a wild squash. There are several dozen kinds of wild squashes in tropical regions. Like most squashes, the luffa is a vine with leaves 7.5 to 20 centimeters across having 3 lobes. Some squashes have leaves twice this size. Luffa fruits are oblong or cylindrical, smooth, and many-seeded. Luffa flowers are bright yellow. The luffa fruit, when mature, is brown and resembles the cucumber.

**Edible Parts: [15]** You can boil the young green (half-ripe) fruit and eat them as a vegetable. Adding coconut milk will improve the flavor. After ripening, the luffa sponge develops an inedible sponge like texture in the interior of the fruit. You can also eat the tender shoots, flowers, and young leaves after cooking them. Roast the mature seeds a little and eat them like peanuts.

**100 Gourd / Luffa 50 Seeds for planting 100 Luffa Sponge**

**Wild grape vine [10] E,M**

**Description:** The wild grape vine climbs with the aid of tendrils. Most grape vines produce deeply lobed leaves similar to the cultivated grape. Wild grapes grow in pyramidal, hanging bunches and are black-blue to amber, or white when ripe.

**Edible Parts: [10]** The ripe grape is the portion eaten. Grapes are rich in natural sugars and, for this reason, are much sought after as a source of energy-giving wild food. None are poisonous.

**Other Uses: [20]** You can obtain water from severed grape vine stems. Cut off the vine at the bottom and place the cut end in a container. Make a slant-wise cut into the vine about 1.8 meters upon the hanging part. This cut will allow water to flow from the bottom end. As water diminishes in volume, make additional cuts further down the vine.

**Craft Cooking - Wine (20)**

**100 Fruit 300 Wine**

**Wild onion and garlic [10]****E, G, M, D****Description:** *Allium cernuum* is an example of the many species of wild onions and garlic's, all**Edible Parts:** [10]The bulbs and young leaves are edible raw or cooked. Use in soup or to flavor meat.**Other Uses:**[15] Eating large quantities of onions will give your body an odor that will help to repel insects. Garlic juice works as an antibiotic on wounds**Craft Alchemy - Insecticide, Cure Light Potion(10, 20)** Cure Light does 1d8 healing**50 Onion/ Garlic      50 Seeds for planting    100 insecticide      200 Cure light potion****Wild pistachio [10]****E, W****Description:** Some kinds of pistachio trees are evergreen, while others lose their leaves during the dry season. The leaves alternate on the stem and have either three large leaves or a number of leaflets. The fruits or nuts are usually hard and dry at maturity.**Edible Parts:** [10] You can eat the oil nut kernels after parching them over coals.**10 Wood      100 Nuts****Wild rice [15]****E****Description:** Wild rice is a tall grass that averages 1 to 1.5 meters in height, but may reach 4.5 meters. Its grain grows in very loose heads at the top of the plant and is dark brown or blackish when ripe.**Edible Parts:** [15] During the spring and summer, the central portion of the lower stems and root shoots are edible. Remove the tough covering before eating. During the late summer and fall, collect the straw-covered husks. Dry and parch the husks, break them, and remove the rice. Boil or roast the rice and then beat it into flour. **Craft Cooking [10]** - Flour**100 Rice      200 Rice Flour****Wild rose [5]****E, G, M****Description:** This shrub grows 60 centimeters to 2.5 meters high. It has alternate leaves and sharp prickles. Its flowers may be red, pink, or yellow. Its fruit, called rose hip, stays on the shrub year-round.**Edible Parts:**[15] The flowers and buds are edible raw or boiled. In an emergency, you can peel and eat the young shoots. You can boil fresh, young leaves in water to make a tea. After the flower petals fall, eat the rose hips; the pulp is highly nutritious and an excellent source of vitamin C. Crush or grind dried rose hips to make flour.**Craft Cooking - Flour (10) Tea (10)****100 Flower    50 Tea      50 Flour      50 Seeds for planting****Wood sorrel [15]****E****Description:** Wood sorrel resembles shamrock or four-leaf clover, with a bell-shaped pink, yellow, or white flower.**Edible Parts:** [15] Cook the entire plant.**50 Clover****Yam [15]****E****Description:** These plants are vines that creep along the ground. They have alternate, heart-or arrow-shaped leaves. Their rootstock may be very large and weigh many kilograms.**Edible Parts:** Boil the rootstock and eat it as a vegetable.**100 Root**

**Yam bean [10]****E, P, M**

**Description:** The yam bean is a climbing plant of the bean family, with alternate, three-parted leaves and a turnip-like root. The bluish or purplish flowers are pea-like in shape. The plants are often so rampant that they cover the vegetation upon which they are growing.

**Edible Parts: [15]** The tubers are about the size of a turnip and they are crisp, sweet, and juicy and have a nutty flavor. They are nourishing and at the same time quench the thirst. Eat them raw or boiled. To make flour, slice the raw tubers, let them dry in the sun, and grind into a flour that is high in starch and may be used to thicken soup. **Craft cooking [10]** - Flour

**CAUTION [15]** The raw seeds are poisonous. In the raw does DC 15 Fort vs. 1d6 an hour for 1d20 hours, Craft Chemical DC 20 - Processed Poison DC 20 Fort vs. 1d12 an hour for 1d20 hours

**100 Tuber      50 Seeds      100 Processed Poison**

**Yarrow [15]****D**

**Description:** a woody like stem with tiny white flowers and fern like leaves.

**Other Uses: [20]** Eaten to counter poisoning, but must be eaten quickly

**Craft Alchemy - Antidote (20)** Removes Poison effects
